Exam A

QUESTION 1
Given:

```java
public class Threads2 implements Runnable {
    public void run() {
        System.out.println("run.");
        throw new RuntimeException("Problem");
    }

    public static void main(String[] args) {
        Thread t = new Thread(new Threads2());
        t.start();
        System.out.println("End of method.");
    }
}
```

Which two can be results? (Choose two.)

A. java.lang.RuntimeException: Problem
B. run.
   java.lang.RuntimeException: Problem
C. End of method.
   java.lang.RuntimeException: Problem
D. End of method.
   run.
   java.lang.RuntimeException: Problem
E. run.
   java.lang.RuntimeException: Problem
   End of method.

Answer: DE
Section: All

Explanation/Reference:
```
End of method.
run.
Exception in thread "Thread-0" java.lang.RuntimeException: Problem
    at Threads2.run(Threads2.java:5)
    at java.lang.Thread.run(Unknown Source)
```

QUESTION 2
Which two statements are true? (Choose two.)

A. It is possible for more than two threads to deadlock at once.
B. The JVM implementation guarantees that multiple threads cannot enter into a deadlocked state.
C. Deadlocked threads release once their sleep() method's sleep duration has expired.
D. Deadlocking can occur only when the wait(), notify(), and notifyAll() methods are used incorrectly.
E. It is possible for a single-threaded application to deadlock if synchronized blocks are used incorrectly.
F. If a piece of code is capable of deadlocking, you cannot eliminate the possibility of deadlocking by inserting invocations of Thread.yield().

Answer: AF
Section: All

Explanation/Reference:

QUESTION 3
Given:

```java
void waitForSignal() {
    Object obj = new Object();
    synchronized (Thread.currentThread()) {
        obj.wait();
        obj.notify();
    }
}
```

Which statement is true?

A. This code can throw an InterruptedException.
B. This code can throw an IllegalMonitorStateException.
C. This code can throw a TimeoutException after ten minutes.
D. Reversing the order of obj.wait() and obj.notify() might cause this method to complete normally.
E. A call to notify() or notifyAll() from another thread might cause this method to complete normally.
F. This code does NOT compile unless "obj.wait()" is replaced with "((Thread) obj).wait()".

Answer: B
Section: All

Explanation/Reference:
Not quite sure about the answer, because first of all this code will not compile:

```
Threads2.java:15: unreported exception java.lang.InterruptedException; must be
caught or declared to be thrown
              obj.wait();
                 ^
1 error
```

QUESTION 4
Given:

```java
class PingPong2 {
    synchronized void hit(long n) {
        for(int i = 1; i < 3; i++)
            System.out.print(n + "-" + i + " ");
    }
}

public class Tester implements Runnable {
    static PingPong2 pp2 = new PingPong2();

    public static void main(String[] args) {
        new Thread(new Tester()).start();
        new Thread(new Tester()).start();
    }

    public void run() { pp2.hit(Thread.currentThread().getId()); }
}
```

Which statement is true?

A. The output could be 5-1 6-1 6-2 5-2
B. The output could be 6-1 6-2 5-1 5-2
C. The output could be 6-1 5-2 6-2 5-1
D. The output could be 6-1 6-2 5-1 7-1

Answer: B
Section: All

Explanation/Reference:

QUESTION 5
Given:

```java
public class Threads4 {
    public static void main (String[] args) {
        new Threads4().go();
    }

    public void go() {
        Runnable r = new Runnable() {
            public void run() {
                System.out.print("foo");
            }
        };
        Thread t = new Thread(r);
        t.start();
        t.start();
    }
}
```

What is the result?

A. Compilation fails.
B. An exception is thrown at runtime.
C. The code executes normally and prints "foo".
D. The code executes normally, but nothing is printed.

Answer: B
Section: All

Explanation/Reference:
```
Exception in thread "main" java.lang.IllegalThreadStateException
    at java.lang.Thread.start(Unknown Source)
    at Threads4.go(Threads4.java:14)
    at Threads4.main(Threads4.java:3)
foo
```

QUESTION 6
Given:

```java
public abstract class Shape {
```

```
        private int x;
        private int y;

        public abstract void draw();

        public void setAnchor(int x, int y) {
            this.x = x;
            this.y = y;
        }
}
```

Which two classes use the Shape class correctly? (Choose two.)

A. ```
   public class Circle implements Shape {
       private int radius;
   }
   ```
B. ```
   public abstract class Circle extends Shape {
       private int radius;
   }
   ```
C. ```
   public class Circle extends Shape {
       private int radius;
       public void draw();
   }
   ```
D. ```
   public abstract class Circle implements Shape {
       private int radius;
       public void draw();
   }
   ```
E. ```
   public class Circle extends Shape {
       private int radius;
       public void draw() {/* code here */}
   }
   ```
F. ```
   public abstract class Circle implements Shape {
       private int radius;
       public void draw() {/* code here */}
   }
   ```

Answer: BE
Section: All

Explanation/Reference:

QUESTION 7
Given:

```
public class Barn {
    public static void main(String[] args) {
        new Barn().go("hi", 1);
        new Barn().go("hi", "world", 2);
    }

    public void go(String... y, int x) {
        System.out.print(y[y.length - 1] + " ");
    }
}
```

What is the result?

A. hi hi

B. hi world

C. world world

D. Compilation fails.

E. An exception is thrown at runtime.

Answer: D
Section: All

Explanation/Reference:
The method go(String[], int) in the type Barn is not applicable for the arguments (String, int)

The variable argument type String of the method go must be the last parameter

QUESTION 8
Given:

```
class Nav{
    public enum Direction { NORTH, SOUTH, EAST, WEST }
}

public class Sprite{
    // insert code here
}
```

Which code, inserted at line 14, allows the Sprite class to compile?

A. Direction d = NORTH;

B. Nav.Direction d = NORTH;

C. Direction d = Direction.NORTH;

D. Nav.Direction d = Nav.Direction.NORTH;

Answer: D
Section: All

Explanation/Reference:

QUESTION 9
Which statement is true about the classes and interfaces in the exhibit?

```
01. public interface A {
02.    public void doSomething(String thing);
03. }

01. public class AImpl implements A {
02.     public void doSomething(String msg) {}
03. }

01. public class B {
02.    public A doit(){
03.          //more code here
04.     }
05.     public String execute(){
06           //more code here
```

```
07      }
08. }
```

```
01. public class C extends B {
02.    public AImpl doit(){
03.        //more code here
04.    }
05.
06.    public Object execute() {
07.        //more code here
08.    }
09. }
```

A. Compilation will succeed for all classes and interfaces.
B. Compilation of class C will fail because of an error in line 2.
C. Compilation of class C will fail because of an error in line 6.
D. Compilation of class AImpl will fail because of an error in line 2.

Answer: C
Section: All

Explanation/Reference:
The return type is incompatible with B.execute()

QUESTION 10
What is the result?

```
11. public class Person {
12.    String name = "No name";
13.    public Person(String nm) { name = nm; }
14. }
15.
16. public class Employee extends Person {
17.    String empID = "0000";
18.    public Employee(String id) { empID = id; }
19. }
20.
21. public class EmployeeTest {
22.    public static void main(String[] args){
23.        Employee e = new Employee("4321");
24.        System.out.println(e.empID);
25.    }
26. }
```

A. 4321
B. 0000
C. An exception is thrown at runtime.
D. Compilation fails because of an error in line 18.

Answer: D
Section: All

Explanation/Reference:
Implicit super constructor Person() is undefined. Must explicitly invoke another constructor

QUESTION 11

Given:

```
01. public class Rainbow {
02.     public enum MyColor {
03.         RED(0xff0000), GREEN(0x00ff00), BLUE(0x0000ff);
04.         private final int rgb;
05.         MyColor(int rgb) { this.rgb = rgb; }
06.         public int getRGB() { return rgb; }
07.     };
08.     public static void main(String[] args) {
09.         //insert code here
10.     }
11. }
```

Which code fragment, inserted at line 9, allows the Rainbow class to compile?

A. `MyColor skyColor = BLUE;`

B. `MyColor treeColor = MyColor.GREEN;`

C. `if(RED.getRGB() < BLUE.getRGB()) { }`

D. Compilation fails due to other error(s) in the code.

E. `MyColor purple = new MyColor(0xff00ff);`

F. `MyColor purple = MyColor.BLUE + MyColor.RED;`

Answer: B
Section: All

Explanation/Reference:

QUESTION 12
Given:

```
01. public class Mud {
02.     //insert code here
03.         System.out.println("hi");
04.     }
05. }
```

And the following five fragments:

```
public static void main(String...a) {
public static void main(String.* a) {
public static void main(String... a) {
public static void main(String[]... a) {
public static void main(String...[] a) {
```

How many of the code fragments, inserted independently at line 2, compile?

A. 0
B. 1
C. 2
D. 3
E. 4
F. 5

Explanation/Reference:
```
public static void main(String...a) {
public static void main(String... a) {
public static void main(String[]... a) {
```

QUESTION 13
Given:

```
class Atom {
    Atom() { System.out.print("atom "); }
}

class Rock extends Atom {
    Rock(String type) { System.out.print(type); }
}

public class Mountain extends Rock {
    Mountain() {
        super("granite ");
        new Rock("granite ");
    }
    public static void main(String[] a) { new Mountain(); }
}
```

What is the result?

A. Compilation fails.
B. atom granite
C. granite granite
D. atom granite granite
E. An exception is thrown at runtime.
F. atom granite atom granite

Answer: F
Section: All

Explanation/Reference:

QUESTION 14
Given:

```
01. interface TestA { String toString(); }
02.
03. public class Test {
04.     public static void main(String[] args) {
05.         System.out.println(new TestA() {
06.             public String toString() { return "test"; }
07.         });
08.     }
09. }
```

What is the result?

A. test
B. null
C. An exception is thrown at runtime.
D. Compilation fails because of an error in line 1.
E. Compilation fails because of an error in line 5.
F. Compilation fails because of an error in line 6.

Answer: A
Section: All

Explanation/Reference:

QUESTION 15
Given:

```
public static void parse(String str) {
    try {
        float f = Float.parseFloat(str);
    } catch (NumberFormatException nfe) {
        f = 0;
    } finally {
        System.out.println(f);
    }
}

public static void main(String[] args) {
    parse("invalid");
}
```

What is the result?

A. 0.0
B. Compilation fails.
C. A ParseException is thrown by the parse method at runtime.
D. A NumberFormatException is thrown by the parse method at runtime.

Answer: B
Section: All

Explanation/Reference:
f cannot be resolved

QUESTION 16
Given:

```
01. public class Blip {
02.     protected int blipvert(int x) { return 0; }
03. }
04. class Vert extends Blip {
05.     // insert code here
06. }
```

Which five methods, inserted independently at line 5, will compile? (Choose five.)

A. `public int blipvert(int x) { return 0; }`
B. `private int blipvert(int x) { return 0; }`
C. `private int blipvert(long x) { return 0; }`
D. `protected long blipvert(int x) { return 0; }`
E. `protected int blipvert(long x) { return 0; }`
F. `protected long blipvert(long x) { return 0; }`
G. `protected long blipvert(int x, int y) { return 0; }`

Answer: ACEFG
Section: All

Explanation/Reference:
`private int blipvert(int x) { return 0; }` – Cannot reduce the visibility of the inherited method from Blip
`protected long blipvert(int x) { return 0; }` – The return type is incompatible with Blip. blipvert(int)

QUESTION 17
Given:

```
01. class Super {
02.    private int a;
03.    protected Super(int a) { this.a = a; }
04. }

11. class Sub extends Super {
12.    public Sub(int a) { super(a); }
13.    public Sub() { this.a = 5; }
14. }
```

Which two, independently, will allow Sub to compile? (Choose two.)

A. Change line 2 to:
   `public int a;`
B. Change line 2 to:
   `protected int a;`
C. Change line 13 to:
   `public Sub() { this(5); }`
D. Change line 13 to:
   `public Sub() { super(5); }`
E. Change line 13 to:
   `public Sub() { super(a); }`

Answer: CD
Section: All

Explanation/Reference:

QUESTION 18
Which Man class properly represents the relationship "Man has a best friend who is a Dog"?

A. **class** Man **extends** Dog { }
B. **class** Man **implements** Dog { }
C. **class** Man { **private** BestFriend dog; }
D. **class** Man { **private** Dog bestFriend; }
E. **class** Man { **private** Dog<bestFriend>; }
F. **class** Man { **private** BestFriend<dog>; }

Answer: D
Section: All

Explanation/Reference:

QUESTION 19
Given:

```
package test;

class Target {
    public String name = "hello";
}
```

What can directly access and change the value of the variable name?

A. any class
B. only the Target class
C. any class in the test package
D. any class that extends Target

Answer: C
Section: All

Explanation/Reference:

QUESTION 20
Given:

```
11. abstract class Vehicle { public int speed() { return 0; }
12. class Car extends Vehicle { public int speed() { return 60; }
13. class RaceCar extends Car { public int speed() { return 150; } ...

21. RaceCar racer = new RaceCar();
22. Car car = new RaceCar();
23  Vehicle vehicle = new RaceCar();
24  System.out.println(racer.speed() + ", " + car.speed() + ", " + vehicle.speed
());
```

What is the result?

A. 0, 0, 0
B. 150, 60, 0

C. Compilation fails.

D. 150, 150, 150

E. An exception is thrown at runtime.

Answer: D
Section: All

Explanation/Reference:

QUESTION 21
Given:

```
05. class Building { }
06. public class Barn extends Building {
07.     public static void main(String[] args) {
08.         Building build1 = new Building();
09.         Barn barn1 = new Barn();
10.         Barn barn2 = (Barn) build1;
11.         Object obj1 = (Object) build1;
12.         String str1 = (String) build1;
13.         Building build2 = (Building) barn1;
14.     }
15. }
```

Which is true?

A. If line 10 is removed, the compilation succeeds.

B. If line 11 is removed, the compilation succeeds.

C. If line 12 is removed, the compilation succeeds.

D. If line 13 is removed, the compilation succeeds.

E. More than one line must be removed for compilation to succeed.

Answer: C
Section: All

Explanation/Reference:
Cannot cast from Building to String

QUESTION 22
A team of programmers is reviewing a proposed API for a new utility class. After some discussion, they realize that they can reduce the number of methods in the API without losing any functionality. If they implement the new design, which two OO principles will they be promoting?

A. Looser coupling

B. Tighter coupling

C. Lower cohesion

D. Higher cohesion

E. Weaker encapsulation

F. Stronger encapsulation

Answer: A
Section: All

QUESTION 23
Given:

```
21. class Money {
22.     private String country = "Canada";
23.     public String getC() { return country; }
24. }
25. class Yen extends Money {
26.     public String getC() { return super.country; }
27. }
28. public class Euro extends Money {
29.     public String getC(int x) { return super.getC(); }
30.     public static void main(String[] args) {
31.         System.out.print(new Yen().getC() + " " + new Euro().getC());
32.     }
33. }
```

What is the result?

A. Canada

B. null Canada

C. Canada null

D. Canada Canada

E. Compilation fails due to an error on line 26.

F. Compilation fails due to an error on line 29.

Answer: E
Section: All

Explanation/Reference:
The field Money.country is not visible

QUESTION 24
Assuming that the serializeBanana() and the deserializeBanana() methods will correctly use Java serialization and given:

```
13. import java.io.*;
14. class Food implements Serializable {int good = 3;}
15. class Fruit extends Food {int juice = 5;}
16. public class Banana extends Fruit {
17.     int yellow = 4;
18.     public static void main(String [] args) {
19.         Banana b = new Banana(); Banana b2 = new Banana();
20.         b.serializeBanana(b); // assume correct serialization
21.         b2 = b.deserializeBanana(); // assume correct
22.         System.out.println("restore "+b2.yellow+ b2.juice+b2.good);
24.     }
25.     // more Banana methods go here
50. }
```

What is the result?

A. restore 400
B. restore 403
C. restore 453
D. Compilation fails.
E. An exception is thrown at runtime.

Answer: C
Section: All

Explanation/Reference:

QUESTION 25
Given a valid DateFormat object named df, and

```
16. Date d = new Date(0L);
17. String ds = "December 15, 2004";
18. //insert code here
```

What updates d's value with the date represented by ds?

```
A. d = df.parse(ds);
B. d = df.getDate(ds);
C. try {
       d = df.parse(ds);
   } catch(ParseException e) { };
D. try {
       d = df.getDate(ds);
   } catch(ParseException e) { };
```

Answer: C
Section: All

Explanation/Reference:

QUESTION 26
Given:

```
11. double input = 314159.26;
12. NumberFormat nf = NumberFormat.getInstance(Locale.ITALIAN);
13. String b;
14. //insert code here
```

Which code, inserted at line 14, sets the value of b to 314.159,26?

```
A. b = nf.parse( input );
B. b = nf.format( input );
C. b = nf.equals( input );
D. b = nf.parseObject( input );
```

Answer: B
Section: All

Explanation/Reference:

QUESTION 27
Given:

```java
public class TestString1 {
    public static void main(String[] args) {
        String str = "420";
        str += 42;
        System.out.print(str);
    }
}
```

What is the output?

A. 42
B. 420
C. 462
D. 42042
E. Compilation fails.
F. An exception is thrown at runtime.

Answer: D
Section: All

Explanation/Reference:

QUESTION 28
Which capability exists only in java.io.FileWriter?

A. Closing an open stream.
B. Flushing an open stream.
C. Writing to an open stream.
D. Writing a line separator to an open stream.

Answer: D
Section: All

Explanation/Reference:

QUESTION 29
Given that the current directory is empty, and that the user has read and write permissions, and the following:

```java
import java.io.*;
public class DOS {
    public static void main(String[] args) {
        File dir = new File("dir");
        dir.mkdir();
        File f1 = new File(dir, "f1.txt");
```

```
        try {
            f1.createNewFile();
        } catch (IOException e) { ; }
        File newDir = new File("newDir");
        dir.renameTo(newDir);
    }
}
```

Which statement is true?

A. Compilation fails.
B. The file system has a new empty directory named dir.
C. The file system has a new empty directory named newDir.
D. The file system has a directory named dir, containing a file f1.txt.
E. The file system has a directory named newDir, containing a file f1.txt.

Answer: E

QUESTION 30
Given:

```
static void test() throws RuntimeException {
    try {
        System.out.print("test ");
        throw new RuntimeException();
    }
    catch (Exception ex) { System.out.print("exception "); }
}

public static void main(String[] args) {
    try { test(); }
    catch (RuntimeException ex) { System.out.print("runtime "); }
    System.out.print("end ");
}
```

What is the result?

A. test end
B. Compilation fails.
C. test runtime end
D. test exception end
E. A Throwable is thrown by main at runtime.

Answer: D
Section: All

Explanation/Reference:

QUESTION 31
Given:

```java
public class Score implements Comparable<Score> {
    private int wins, losses;
    public Score(int w, int l) { wins = w; losses = l; }
    public int getWins() { return wins; }
    public int getLosses() { return losses; }
    public String toString() {
        return "<" + wins + "," + losses + ">";
    }
    // insert code here
}
```

Which method will complete this class?

A. `public int compareTo(Object o){/*more code here*/}`

B. `public int compareTo(Score other){/*more code here*/}`

C. `public int compare(Score s1,Score s2){/*more code here*/}`

D. `public int compare(Object o1,Object o2){/*more code here*/}`

Answer: B
Section: All

Explanation/Reference:

QUESTION 32
A company has a business application that provides its users with many different reports: receivables reports, payables reports, revenue projects, and so on. The company has just purchased some new, state-of-the-art, wireless printers, and a programmer has been assigned the task of enhancing all of the reports to use not only the company's old printers, but the new wireless printers as well. When the programmer starts looking into the application, the programmer discovers that because of the design of the application, it is necessary to make changes to each report to support the new printers.Which two design concepts most likely explain this situation? (Choose two.)

A. Inheritance
B. Low cohesion
C. Tight coupling
D. High cohesion
E. Loose coupling
F. Object immutability

Answer: BC

QUESTION 33
Given:

```java
10. public class SuperCalc {
11.     protected static int multiply(int a, int b) { return a * b;}
12. }
```

and:

```
20.    public class SubCalc extends SuperCalc{
21.    public static int multiply(int a, int b) {
22.        int c = super.multiply(a, b);
23.        return c;
24.    }
25. }
```

and:

```
30.    SubCalc sc = new SubCalc ();
31. System.out.println(sc.multiply(3,4));
32. System.out.println(SubCalc.multiply(2,2));
```

What is the result?

A. 12
B. The code runs with no output.
C. An exception is thrown at runtime.
D. Compilation fails because of an error in line 21.
E. Compilation fails because of an error in line 22.
F. Compilation fails because of an error in line 31.

Answer: E
Section: All

Explanation/Reference:
Cannot use super in a static context

QUESTION 34
Given:

```
class Foo {
    public int a = 3;
    public void addFive() { a += 5; System.out.print("f "); }
}

class Bar extends Foo {
    public int a = 8;
    public void addFive() { this.a += 5; System.out.print("b " ); }
}
```

Invoked with:

```
Foo f = new Bar();
f.addFive();
System.out.println(f.a);
```

What is the result?

A. b 3
B. b 8
C. b 13
D. f 3
E. f 8

F. f 13

G. Compilation fails.

H. An exception is thrown at runtime.

Answer: A

QUESTION 35
Given:

```
22. StringBuilder sb1 = new StringBuilder("123");
23. String s1 = "123";
24. // insert code here
25. System.out.println(sb1 + " " + s1);
```

Which code fragment, inserted at line 24, outputs "123abc 123abc"?

A. `sb1.append("abc"); s1.append("abc");`

B. `sb1.append("abc"); s1.concat("abc");`

C. `sb1.concat("abc"); s1.append("abc");`

D. `sb1.concat("abc"); s1.concat("abc");`

E. `sb1.append("abc"); s1 = s1.concat("abc");`

F. `sb1.concat("abc"); s1 = s1.concat("abc");`

G. `sb1.append("abc"); s1 = s1 + s1.concat("abc");`

H. `sb1.concat("abc"); s1 = s1 + s1.concat("abc");`

Answer: E

QUESTION 36
Which code, inserted at line 14, will allow this class to correctly serialize and deserialize?

```
01. import java.io.*;
02. public class Foo implements Serializable {
03.     public int x, y;
04.     public Foo(int x, int y){
05.         this.x = x; this.y = y;
06.     }
07.
08.     private void writeObject(ObjectOutputStream s)
09.         throws IOException{
10.         s.writeInt(x); s.writeInt(y);
11.     }
12.
13.     private void readObject(ObjectInputStream s)
14.         throws IOException, ClassNotFoundException {
15.         //insert code here
16.     }
```

```
17. }
```

A. `s.defaultReadObject();`
B. `this = s.defaultReadObject();`
C. `y = s.readInt(); x = s.readInt();`
D. `x = s.readInt(); y = s.readInt();`

Given:

```
33. try {
34.     //some code here
35. } catch (NullPointerException e1) {
36.     System.out.print("a");
37. } catch (Exception e2) {
38.     System.out.print("b");
39. } finally {
40.     System.out.print("c");
41. }
```

If some sort of exception is thrown at line 34, which output is possible?

A. a
B. b
C. c
D. ac
E. abc

Answer: D
Section: All

Explanation/Reference:

QUESTION 42
Given:

```
31. //some code here line 31
32. try {
33.     //some code here line 33
34. } catch (NullPointerException e1) {
35.     //some code here line 35
```

```
36. } finally {
37.     //some code here line 37
38. }
```

Under which three circumstances will the code on line 37 be executed? (Choose three.)

A. The instance gets garbage collected.
B. The code on line 33 throws an exception.
C. The code on line 35 throws an exception.
D. The code on line 31 throws an exception.
E. The code on line 33 executes successfully.

QUESTION 44
Given:

```
public class Donkey2 {
    public static void main(String[] args) {
        boolean assertsOn = true;
        assert (assertsOn) : assertsOn = true;
        if(assertsOn) {
            System.out.println("assert is on");
        }
    }
}
```

If class Donkey is invoked twice, the first time without assertions enabled, and the second time with assertions enabled, what are the results?

A. no output

B. no output
   assert is on

C. assert is on

D. no output
   An AssertionError is thrown.

E. assert is on
   An AssertionError is thrown.

Answer: C

Explanation/Reference:

QUESTION 45
Given:

```
01. public class A{
02.    public void method1() {
03.         try {
04.             B b = new B();
05.             b.method2();
06.             //more code here
07.         } catch (TestException te){
08.             throw new RuntimeException(te);
09.         }
10.     }
11. }
```

```
01. public class B{
02.    public void method2() throws TestException {
03.         //more code here
04     }
05. }
```

```
01. class TestException extends Exception {
02. }
```

```
31. public void method() {
32.    A a = new A();
33.    a.method1();
34. }
```

Which statement is true if a TestException is thrown on line 3 of class B?

A. Line 33 must be called within a try block.
B. The exception thrown by method1 in class A is not required to be caught.
C. The method declared on line 31 must be declared to throw a RuntimeException.
D. On line 5 of class A, the call to method2 of class B does not need to be placed in a try/catch block.

Answer: B

QUESTION 48
Given:

```
01. public class Person {
02.     private String name;
03.     public Person(String name) { this.name = name; }
04.     public boolean equals(Person p) {
05.         return p.name.equals(this.name);
06.     }
07. }
```

Which statement is true?

A. The equals method does NOT properly override the Object.equals method.
B. Compilation fails because the private attribute p.name cannot be accessed in line 5.
C. To work correctly with hash-based data structures, this class must also implement the hashCode method.
D. When adding Person objects to a java.util.Set collection, the equals method in line 4 will prevent duplicates.

Answer: A
Section: All

Explanation/Reference:

QUESTION 49
Which two statements are true about the hashCode method? (Choose two.)

A. The hashCode method for a given class can be used to test for object equality and object inequality for that class.
B. The hashCode method is used by the java.util.SortedSet collection class to order the elements within that set.
C. The hashCode method for a given class can be used to test for object inequality, but NOT object equality, for that class.
D. The only important characteristic of the values returned by a hashCode method is that the distribution of values must follow a Gaussian distribution.
E. The hashCode method is used by the java.util.HashSet collection class to group the elements within that set into hash buckets for swift retrieval.

Answer: CE

Explanation/Reference:

QUESTION 50
Given a pre-generics implementation of a method:

```
11. public static int sum(List list) {
12.     int sum = 0;
13.     for ( Iterator iter = list.iterator(); iter.hasNext(); ) {
14.         int i = ((Integer)iter.next()).intValue();
15.         sum += i;
16.     }
17.     return sum;
18. }
```

What three changes allow the class to be used with generics and avoid an unchecked warning? (Choose three.)

A. Remove line 14.

B. Replace line 14 with `int i = iter.next();`

C. Replace line 13 with `for (int i : intList) {`

D. Replace line 13 with `for (Iterator iter : intList) {`

E. Replace the method declaration `with sum(List<int> intList)`

F. Replace the method declaration `with sum(List<Integer> intList)`

Answer: ACF

QUESTION 52
Given a class Repetition:

```
package utils;

public class Repetition {
    public static String twice(String s) { return s + s; }
}
```

and given another class Demo:

```
01. public class Demo {
02.     public static void main(String[] args) {
03.         System.out.println(twice("pizza"));
04.     }
05. }
```

Which code should be inserted at line 1 of Demo.java to compile and run Demo to print "pizzapizza"?

A. `import utils.*;`
B. `static import utils.*;`
C. `import utils.Repetition.*;`
D. `static import utils.Repetition.*;`
E. `import utils.Repetition.twice();`
F. `import static utils.Repetition.twice;`
G. `static import utils.Repetition.twice;`

Answer: F

QUESTION 4
A company that makes Computer Assisted Design (CAD) software has, within its application, some utility classes that are used to perform 3D rendering tasks. The company's chief scientist has just improved the performance of one of the utility classes' key rendering algorithms, and has assigned a programmer to replace the old algorithm with the new algorithm. When the programmer begins researching the utility classes, she is happy to discover that the algorithm to be replaced exists in only one class. The programmer reviews that class's API, and replaces the old algorithm with the new algorithm, being careful that her changes adhere strictly to the class's API. Once testing has begun, the programmer discovers that other classes that use the class she changed are no longer working properly. What design flaw is most likely the cause of these new bugs?

A. Inheritance
B. Tight coupling
C. Low cohesion
D. High cohesion
E. Loose coupling
F. Object immutability

Answer: B
Section: All

Explanation/Reference:

QUESTION 5
Given:

```
class ClassA {
    public int numberOfInstances;

    protected ClassA(int numberOfInstances) {
        this.numberOfInstances = numberOfInstances;
    }
}

public class ExtendedA extends ClassA {
    private ExtendedA(int numberOfInstances) {
        super(numberOfInstances);
    }

    public static void main(String[] args) {
        ExtendedA ext = new ExtendedA(420);
        System.out.print(ext.numberOfInstances);
    }
}
```

Which statement is true?

A. 420 is the output.
B. An exception is thrown at runtime.
C. All constructors must be declared public.
D. Constructors CANNOT use the private modifier.
E. Constructors CANNOT use the protected modifier.

Answer: A
Section: All

QUESTION 6
Given:

```
class ClassA {}
class ClassB extends ClassA {}
class ClassC extends ClassA {}
```

and:

```
ClassA p0 = new ClassA();
ClassB p1 = new ClassB();
ClassC p2 = new ClassC();
ClassA p3 = new ClassB();
ClassA p4 = new ClassC();
```

Which three are valid? (Choose three.)

A. `p0 = p1;`

B. `p1 = p2;`
C. `p2 = p4;`
D. `p2 = (ClassC)p1;`
E. `p1 = (ClassB)p3;`
F. `p2 = (ClassC)p4;`

Answer: AEF
Section: All

Explanation/Reference:
`p1 = p2;` //type mismatch: cannot convert from ClassC to ClassB
`p2 = p4;` //type mismatch: cannot convert from ClassA to ClassC
`p2 = (ClassC)p1;` //cannot cast from ClassB to ClassC

QUESTION 7
Given:

```
class Thingy { Meter m = new Meter(); }

class Component { void go() { System.out.print("c"); } }

class Meter extends Component { void go() { System.out.print("m"); } }

class DeluxeThingy extends Thingy {
    public static void main(String[] args) {
        DeluxeThingy dt = new DeluxeThingy();
        dt.m.go();
        Thingy t = new DeluxeThingy();
        t.m.go();
    }
}
```

Which two are true? (Choose two.)

A. The output is mm.
B. The output is mc.
C. Component is-a Meter.
D. Component has-a Meter.
E. DeluxeThingy is-a Component.
F. DeluxeThingy has-a Component.

Answer: AF

QUESTION 8
Given:

```
interface Jumper { public void jump(); }

class Animal {}
```

```java
class Dog extends Animal {
    Tail tail;
}

class Beagle extends Dog implements Jumper{
    public void jump() {}
}

class Cat implements Jumper{
    public void jump() {}
}
```

Which three are true? (Choose three.)

A. Cat is-a Animal
B. Cat is-a Jumper
C. Dog is-a Animal
D. Dog is-a Jumper
E. Cat has-a Animal
F. Beagle has-a Tail
G. Beagle has-a Jumper

QUESTION 9
Given:

```java
import java.util.*;

public class WrappedString {
    private String s;

    public WrappedString(String s) { this.s = s; }

    public static void main(String[] args) {
        HashSet<Object> hs = new HashSet<Object>();
        WrappedString ws1 = new WrappedString("aardvark");
        WrappedString ws2 = new WrappedString("aardvark");
        String s1 = new String("aardvark");
        String s2 = new String("aardvark");
        hs.add(ws1); hs.add(ws2); hs.add(s1); hs.add(s2);
        System.out.println(hs.size()); }
}
```

What is the result?

A. 0
B. 1
C. 2
D. 3
E. 4

F. Compilation fails.

G. An exception is thrown at runtime.

Answer: D
Section: All

Explanation/Reference:

QUESTION 10
Given:

```
11. //insert code here
12.    private N min, max;
13.    public N getMin() { return min; }
14.    public N getMax() { return max; }
15.    public void add(N added) {
16.       if (min == null || added.doubleValue() < min.doubleValue())
17.          min = added;
18.       if (max == null || added.doubleValue() > max.doubleValue())
19          max = added;
20.    }
21. }
```

Which two, inserted at line 11, will allow the code to compile? (Choose two.)

A. `public class MinMax<?> {`

B. `public class MinMax<? extends Number> {`

C. `public class MinMax<N extends Object> {`

D. `public class MinMax<N extends Number> {`

E. `public class MinMax<? extends Object> {`

F. `public class MinMax<N extends Integer> {`

QUESTION 13
Given:

```
enum Example { ONE, TWO, THREE }
```

Which statement is true?

A. The expressions (ONE == ONE) and ONE.equals(ONE) are both guaranteed to be true.
B. The expression (ONE < TWO) is guaranteed to be true and ONE.compareTo(TWO) is guaranteed to be less than one.
C. The Example values cannot be used in a raw java.util.HashMap; instead, the programmer must use a java.util.EnumMap.
D. The Example values can be used in a java.util.SortedSet, but the set will NOT be sorted because enumerated types do NOT implement java.lang.Comparable.

Answer: A

QUESTION 15
Given:

```
import java.util.*;

public class Explorer1 {
    public static void main(String[] args) {
        TreeSet<Integer> s = new TreeSet<Integer>();
        TreeSet<Integer> subs = new TreeSet<Integer>();
        for(int i = 606; i < 613; i++)
            if(i%2 == 0) s.add(i);
        subs = (TreeSet)s.subSet(608, true, 611, true);
        s.add(609);
        System.out.println(s + " " + subs);
    }
}
```

What is the result?

A. Compilation fails.
B. An exception is thrown at runtime.
C. [608, 609, 610, 612] [608, 610]
D. [608, 609, 610, 612] [608, 609, 610]
E. [606, 608, 609, 610, 612] [608, 610]
F. [606, 608, 609, 610, 612] [608, 609, 610]

Answer: F
Section: All

Explanation/Reference:

QUESTION 16
Given:

```java
import java.util.*;

public class Quest {
    public static void main(String[] args) {
        String[] colors = {"blue", "red", "green", "yellow", "orange"};
        Arrays.sort(colors);
        int s2 = Arrays.binarySearch(colors, "orange");
        int s3 = Arrays.binarySearch(colors, "violet");
        System.out.println(s2 + " " + s3);
    }
}
```

What is the result?

A. 2 -1
B. 2 -4
C. 2 -5
D. 3 -1
E. 3 -4
F. 3 -5
G. Compilation fails.
H. An exception is thrown at runtime.

Answer: C
Section: All

Explanation/Reference:
public static int binarySearch(Object[] a, Object key)
Searches the specified array for the specified object using the binary search algorithm. The array must be sorted into ascending order according to the natural ordering of its elements (as by the sort(Object[]) method) prior to making this call. If it is not sorted, the results are undefined. (If the array contains elements that are not mutually comparable (for example, strings and integers), it cannot be sorted according to the natural ordering of its elements, hence results are undefined.) If the array contains multiple elements equal to the specified object, there is no guarantee which one will be found.

Parameters:

a - the array to be searched
key - the value to be searched for

Returns:
index of the search key, if it is contained in the array; otherwise, (-(insertion point) - 1). The insertion point is defined as the point at which the key would be inserted into the array: the index of the first element greater than the key, or a.length if all elements in the array are less than the specified key. Note that this guarantees that the return value will be >= 0 if and only if the key is found.

Throws:
ClassCastException - if the search key is not comparable to the elements of the array.

QUESTION 17
Given:

```
34. HashMap props = new HashMap();
35. props.put("key45", "some value");
36. props.put("key12", "some other value");
37. props.put("key39", "yet another value");
38. Set s = props.keySet();
39. //insert code here
```

What, inserted at line 39, will sort the keys in the props HashMap?

A. `Arrays.sort(s);`

B. `s = new TreeSet(s);`

C. `Collections.sort(s);`

D. `s = new SortedSet(s);`

QUESTION 19

Given:

```java
public class TestOne implements Runnable {
    public static void main (String[] args) throws Exception {
        Thread t = new Thread(new TestOne());
        t.start();
        System.out.print("Started");
        t.join();
        System.out.print("Complete");
    }

    public void run() {
        for (int i = 0; i < 4; i++) {
            System.out.print(i);
        }
    }
}
```

What can be a result?

A. Compilation fails.
B. An exception is thrown at runtime.
C. The code executes and prints "StartedComplete".
D. The code executes and prints "StartedComplete0123".
E. The code executes and prints "Started0123Complete".

QUESTION 21
Given:

```java
1. public class TestFive {
2.     private int x;
3.
4.     public void foo() {
5.         int current = x;
6.         x = current + 1;
7.     }
8.
9.     public void go() {
10.         for(int i = 0; i < 5; i++) {
11.             new Thread() {
12.                 public void run() {
13.                     foo();
14.                     System.out.print(x + ", ");
15.                 }
16.             }.start();
17.         }
18.     }
19. }
```

Which two changes, taken together, would guarantee the output: 1, 2, 3, 4, 5, ? (Choose two.)

A. move the line 14 print statement into the foo() method
B. change line 9 to public synchronized void go() {
C. change the variable declaration on line 2 to private volatile int x;
D. wrap the code inside the foo() method with a synchronized(this) block
E. wrap the for loop code inside the go() method with a synchronized block synchronized(this) { // for loop code here }

Given the following six method names:

- addListener
- addMouseListener
- setMouseListener
- deleteMouseListener
- removeMouseListener
- registerMouseListener

How many of these method names follow JavaBean Listener naming rules?

A. 1
B. 2
C. 3
D. 4
E. 5

Answer: B
Section: All

Explanation/Reference:
Listener method names used to "register" a listener with an event source must use the prefix add , followed by

the listener type. For example, addActionzistener() is a valid name for a method that an event source will have to allow others to register for Action events.

Listener method names used to remove ("unregister") a listener must use the prefix remove , followed by the listener type (using the same rules as the registration add method).

QUESTION 36
Given:

```
09. class Line {
10.     public static class Point {}
11. }
12.
13. class Triangle {
14.     public Triangle(){
15.        // insert code here
16.     }
17. }
```

Which code, inserted at line 15, creates an instance of the Point class defined in Line?

A. `Point p = new Point();`
B. `Line.Point p = new Line.Point();`
C. The Point class cannot be instatiated at line 15.
D. `Line l = new Line();`
   `l.Point p = new l.Point();`

Answer: B
Section: All

Explanation/Reference:

QUESTION 37
Given

```
11. public interface Status {
12.     /* insert code here */ int MY_VALUE = 10;
13. }
```

Which three are valid on line 12? (Choose three.)

A. final
B. static
C. native
D. public
E. private
F. abstract
G. protected

Answer: ABD
Section: All

Explanation/Reference:

QUESTION 38
Given:

```java
public class A{
    private int counter = 0;

    public static int getInstanceCount() {
        return counter;
    }

    public A() {
        counter++;
    }
}
```

Given this code from Class B:

```java
25. A a1 = new A();
26. A a2 = new A();
27. A a3 = new A();
28. System.out.println(A.getInstanceCount());
```

What is the result?

A. Compilation of class A fails.
B. Line 28 prints the value 3 to System.out.
C. Line 28 prints the value 1 to System.out.
D. A runtime error occurs when line 25 executes.
E. Compilation fails because of an error on line 28.

Answer: A
Section: All

Explanation/Reference:
 Cannot make a static reference to the non-static field counter

QUESTION 39
Given classes defined in two different files:

```java
package util;

public class BitUtils {
    public static void process(byte[] b) { /* more code here */ }
}
```

```java
1. package app;
2.
3. public class SomeApp {
4.     public static void main(String[] args) {
5.         byte[] bytes = new byte[256];
6.         // insert code here
7.     }
8. }
```

What is required at line 6 in class SomeApp to use the process method of BitUtils?

A. `process(bytes);`
B. `BitUtils.process(bytes);`
C. `util.BitUtils.process(bytes);`
D. SomeApp cannot use methods in BitUtils.
E. `import util.BitUtils.*;`
   `process(bytes);`

Answer: C
Section: All

Explanation/Reference:

QUESTION 40
Which three code fragments, added individually at line 29, produce the output 100? (Choose three.)

```
10. class Inner {
11.     private int x;
12.     public void setX( int x ){ this.x = x; }
13.     public int getX(){ return x;}
14. }
15.
16. class Outer {
17.     private Inner y;
18.     public void setY( Inner y ){ this.y = y; }
19.     public Inner getY() { return y; }
20. }
21.
22. public class Gamma {
23.     public static void main(String[] args) {
24.         Outer o = new Outer();
25.         Inner i = new Inner();
26.         int n = 10;
27.         i.setX(n);
28.         o.setY(i);
29.         // insert code here
30.         System.out.println(o.getY().getX());
31.     }
32.}
```

A. `n = 100;`
B. `i.setX( 100 );`
C. `o.getY().setX( 100 );`
D. `i = new Inner();`
   `i.setX( 100 );`
E. `o.setY( i );`
   `i = new Inner();`
   `i.setX( 100 );`
F. `i = new Inner();`
   `i.setX( 100 );`
   `o.setY( i );`

Answer: BCF
Section: All

QUESTION 41

Given:

```
class Snoochy {
    Boochy booch;

    public Snoochy() { booch = new Boochy(this); }
}

class Boochy {
    Snoochy snooch;

    public Boochy(Snoochy s) { snooch = s; }
}
```

And the statements:

```
21. public static void main(String[] args) {
22.     Snoochy snoog = new Snoochy();
23.     snoog = null;
24.     // more code here
25. }
```

Which statement is true about the objects referenced by snoog, snooch, and booch immediately after line 23 executes?

A. None of these objects are eligible for garbage collection.
B. Only the object referenced by booch is eligible for garbage collection.
C. Only the object referenced by snoog is eligible for garbage collection.
D. Only the object referenced by snooch is eligible for garbage collection.
E. The objects referenced by snooch and booch are eligible for garbage collection.

Answer: E
Section: All

QUESTION 42

Given:

```
04. class Payload {
05.     private int weight;
06.     public Payload (int w) { weight = w; }
07.     public void setWeight(int w) { weight = w; }
08.     public String toString() { return Integer.toString(weight); }
09. }
10.
11. public class TestPayload {
12.     static void changePayload(Payload p) { /* insert code */ }
13.     public static void main(String[] args) {
14.         Payload p = new Payload(200);
```

```
15.          p.setWeight(1024);
16.          changePayload(p);
17.          System.out.println("p is " + p);
18.    }
19. }
```

Which code fragment, inserted at the end of line 12, produces the output p is 420?

A. `p.setWeight(420);`

B. `p.changePayload(420);`

C. `p = new Payload(420);`

D. `Payload.setWeight(420);`

E. `p = Payload.setWeight(420);`

Answer: A

Explanation/Reference:

QUESTION 43
Given:

```
public static void test(String str) {
    int check = 4;
    if (check = str.length()) {
        System.out.print(str.charAt(check -= 1) +", ");
    } else {
        System.out.print(str.charAt(0) + ", ");
    }
}
```

and the invocation:

```
test("four");
test("tee");
test("to");
```

What is the result?

A. r, t, t,

B. r, e, o,

C. Compilation fails.

D. An exception is thrown at runtime.

Answer: C
Section: All

Explanation/Reference:

QUESTION 44
Given classes defined in two different files:

```
package util;
```

```
public class BitUtils {
    private static void process(byte[] b) {}
}
```

```
01. package app;
02. public class SomeApp {
03.     public static void main(String[] args) {
04.         byte[] bytes = new byte[256];
05.         // insert code here
06.     }
07. }
```

What is required at line 5 in class SomeApp to use the process method of BitUtils?

A. `process(bytes);`

B. `BitUtils.process(bytes);`

C. `app.BitUtils.process(bytes);`

D. `util.BitUtils.process(bytes);`

E. `import util.BitUtils.*;`
   `process(bytes);`

F. SomeApp cannot use the process method in BitUtils.

Answer: F
Section: All

Explanation/Reference:

QUESTION 45
Given:

```
public class Pass2 {
    public void main(String [] args) {
        int x = 6;
        Pass2 p = new Pass2();
        p.doStuff(x);
        System.out.print(" main x = " + x);
    }

    void doStuff(int x) {
        System.out.print(" doStuff x = " + x++);
    }
}
```

And the command-line invocations:

```
javac Pass2.java
java Pass2 5
```

What is the result?

A. Compilation fails.
B. An exception is thrown at runtime.
C. doStuff x = 6 main x = 6
D. doStuff x = 6 main x = 7
E. doStuff x = 7 main x = 6

F. doStuff x = 7 main x = 7

Answer: B
Section: All

Explanation/Reference:
 Missing static in main method signature.

QUESTION 46
Given:

```
public class Test {
    public enum Dogs {collie, harrier};

    public static void main(String [] args) {
        Dogs myDog = Dogs.collie;
        switch (myDog) {
        case collie:
            System.out.print("collie ");
        case harrier:
            System.out.print("harrier ");
        }
    }
}
```

What is the result?

A. collie
B. harrier
C. Compilation fails.
D. collie harrier
E. An exception is thrown at runtime.

Answer: D
Section: All

Explanation/Reference:

QUESTION 47
Given:

```
public class Donkey {
    public static void main(String[] args) {
        boolean assertsOn = false;
        assert (assertsOn) : assertsOn = true;
        if(assertsOn) {
            System.out.println("assert is on");
        }
    }
}
```

If class Donkey is invoked twice, the first time without assertions enabled, and the second time with assertions enabled, what are the results?

A. no output
B. no output
   assert is on
C. assert is on
D. no output
   An AssertionError is thrown.
E. assert is on
   An AssertionError is thrown.

Answer: D
Section: All

Explanation/Reference:

QUESTION 48
Given:

```
static void test() {
    try {
        String x = null;
        System.out.print(x.toString() + " ");
    }
    finally { System.out.print("finally "); }
}

public static void main(String[] args) {
    try { test(); }
    catch (Exception ex) { System.out.print("exception "); }
}
```

What is the result?

A. null
B. finally
C. null finally
D. Compilation fails.
E. finally exception

Answer: E
Section: All

Explanation/Reference:

QUESTION 49
Given:

```
static void test() throws Error {
    if (true) throw new AssertionError();
    System.out.print("test ");
}

public static void main(String[] args) {
```

```
        try { test(); }
        catch (Exception ex) { System.out.print("exception "); }
        System.out.print("end ");
    }
}
```

What is the result?

A. end
B. Compilation fails.
C. exception end
D. exception test end
E. A Throwable is thrown by main.
F. An Exception is thrown by main.

Answer: E
Section: All

Explanation/Reference:

QUESTION 50
Given:

```
01. class TestException extends Exception { }
02. class A {
03.    public String sayHello(String name) throws TestException {
04.         if(name == null) throw new TestException();
05.       return "Hello " + name;
06.    }
07. }
08. public class TestA {
09.    public static void main(String[] args) {
10.         new A().sayHello("Aiko");
11.    }
12. }
```

Which statement is true?

A. Compilation succeeds.
B. Class A does not compile.
C. The method declared on line 9 cannot be modified to throw TestException.
D. TestA compiles if line 10 is enclosed in a try/catch block that catches TestException.

Answer: D
Section: All

Explanation/Reference:

QUESTION 51
Given:

```
public static Collection get() {
    Collection sorted = new LinkedList();
```

```
        sorted.add("B"); sorted.add("C"); sorted.add("A");
        return sorted;
    }

    public static void main(String[] args) {
        for (Object obj: get()) {
            System.out.print(obj + ", ");
        }
    }
}
```

What is the result?

A. A, B, C,
B. B, C, A,
C. Compilation fails.
D. The code runs with no output.
E. An exception is thrown at runtime.

Answer: B

QUESTION 55
Given:

```
public static Iterator reverse(List list) {
    Collections.reverse(list);
    return list.iterator();
}

public static void main(String[] args) {
```

```
        List list = new ArrayList();
        list.add("1"); list.add("2"); list.add("3");
        for (Object obj: reverse(list))
            System.out.print(obj + ", ");
}
```

What is the result?

A. 3, 2, 1,
B. 1, 2, 3,
C. Compilation fails.
D. The code runs with no output.
E. An exception is thrown at runtime.

Answer: C
Section: All

Explanation/Reference:
Can only iterate over an array or an instance of java.lang.Iterable

QUESTION 56
Given:

```
01. public class TestString3 {
02.     public static void main(String[] args) {
03.         // insert code here
04.         System.out.println(s);
05.     }
06. }
```

Which two code fragments, inserted independently at line 3, generate the output 4247? (Choose two.)

A. `String s = "123456789";`
   `s = (s-"123").replace(1,3,"24") - "89";`
B. `StringBuffer s = new StringBuffer("123456789");`
   `s.delete(0,3).replace(1,3,"24").delete(4,6);`
C. `StringBuffer s = new StringBuffer("123456789");`
   `s.substring(3,6).delete(1,3).insert(1, "24");`
D. `StringBuilder s = new StringBuilder("123456789");`
   `s.substring(3,6).delete(1,2).insert(1, "24");`
E. `StringBuilder s = new StringBuilder("123456789");`
   `delete(0,3).delete(1,3).delete(2,5).insert(1, "24");`

Answer: BE
Section: All

Explanation/Reference:
The operator - is undefined for argument type(s) String, String
The metod delete(int, int) is undefined for type String

QUESTION 57
Given:

1. d is a valid, non-null Date object
2. df is a valid, non-null DateFormat object set to the current locale

What outputs the current locale's country name and the appropriate version of d's date?

A. `Locale loc = Locale.getLocale();`
   `System.out.println(loc.getDisplayCountry()`
   `        + " " + df.format(d));`
B. `Locale loc = Locale.getDefault();`
   `System.out.println(loc.getDisplayCountry()`
   `        + " " + df.format(d));`
C. `Locale loc = Locale.getLocale();`
   `System.out.println(loc.getDisplayCountry()`
   `        + " " + df.setDateFormat(d));`
D. `Locale loc = Locale.getDefault();`
   `System.out.println(loc.getDisplayCountry()`
   `        + " " + df.setDateFormat(d));`

Answer: B
Section: All

Explanation/Reference:
There is no getLocale method in class Locale.

public static Locale getDefault()
Gets the current value of the default locale for this instance of the Java Virtual Machine.

The Java Virtual Machine sets the default locale during startup based on the host environment. It is used by many locale-sensitive methods if no locale is explicitly specified. It can be changed using the setDefault method.

Returns:
the default locale for this instance of the Java Virtual Machine

QUESTION 58
What is the output if the main() method is run?

```java
public class Starter extends Thread {
    private int x = 2;

    public static void main(String[] args) throws Exception {
        new Starter().makeItSo();
    }

    public Starter(){
        x = 5;
        start();
    }

    public void makeItSo() throws Exception {
        join();
        x = x - 1;
        System.out.println(x);
    }

    public void run() { x *= 2; }
}
```

A. 4
B. 5

C. 8

D. 9

E. Compilation fails.

F. An exception is thrown at runtime.

G. It is impossible to determine for certain.

Answer: D
Section: All

Explanation/Reference:

QUESTION 59
Given a correctly compiled class whose source code is:

```
1. package com.sun.sjcp;
2.
3. public class Commander {
4.     public static void main(String[] args) {
5.         // more code here
6.     }
7. }
```

Assume that the class file is located in /foo/com/sun/sjcp/, the current directory is /foo/, and that the classpath contains "." (current directory). Which command line correctly runs Commander?

A. `java Commander`

B. `java com.sun.sjcp.Commander`

C. `java com/sun/sjcp/Commander`

D. `java -cp com.sun.sjcp Commander`

E. `java -cp com/sun/sjcp Commander`

Answer: B
Section: All

Explanation/Reference:

QUESTION 60
Given:

```
interface DoStuff2 {
    float getRange(int low, int high);
}

interface DoMore {
    float getAvg(int a, int b, int c);
}

abstract class DoAbstract implements DoStuff2, DoMore {
}

06. class DoStuff implements DoStuff2 {
07.     public float getRange(int x, int y) {
```

```
08.            return 3.14f;
09.        }
10. }
11.
12. interface DoAll extends DoMore {
13.     float getAvg(int a, int b, int c, int d);
14. }
```

What is the result?

A. The file will compile without error.
B. Compilation fails. Only line 7 contains an error.
C. Compilation fails. Only line 12 contains an error.
D. Compilation fails. Only line 13 contains an error.
E. Compilation fails. Only lines 7 and 12 contain errors.
F. Compilation fails. Only lines 7 and 13 contain errors.
G. Compilation fails. Lines 7, 12, and 13 contain errors.

Answer: A
Section: All

QUESTION 3
Given:

```java
import java.io.*;

public class Forest implements Serializable {
    private Tree tree = new Tree();

    public static void main(String [] args) {
        Forest f = new Forest();
        try {

            FileOutputStream fs = new FileOutputStream("Forest.ser");
            ObjectOutputStream os = new ObjectOutputStream(fs);
            os.writeObject(f); os.close();
        } catch (Exception ex) { ex.printStackTrace(); }
    }
}

class Tree { }
```

What is the result?

A. Compilation fails.
B. An exception is thrown at runtime.
C. An instance of Forest is serialized.
D. An instance of Forest and an instance of Tree are both serialized.

Answer: B
Section: All

Explanation/Reference:
```
java.io.NotSerializableException: Tree
    at java.io.ObjectOutputStream.writeObject0(Unknown Source)
    at java.io.ObjectOutputStream.defaultWriteFields(Unknown Source)
    at java.io.ObjectOutputStream.writeSerialData(Unknown Source)
    at java.io.ObjectOutputStream.writeOrdinaryObject(Unknown Source)
    at java.io.ObjectOutputStream.writeObject0(Unknown Source)
    at java.io.ObjectOutputStream.writeObject(Unknown Source)
    at Forest.main(Forest.java:9)
```

QUESTION 4
Given:

```java
01. import java.io.*;
02.
03. public class Talk {
04.     public static void main(String[] args) {
05.         Console c = new Console();
06.         String pw;
07.         System.out.print("password: ");
08.         pw = c.readLine();
09.         System.out.println("got " + pw);
10.     }
11. }
```

If the user types the password aiko when prompted, what is the result?

A. password:
   got
B. password:
   got aiko
C. password: aiko
   got aiko
D. An exception is thrown at runtime.
E. Compilation fails due to an error on line 5.

Answer: E
Section: All

Explanation/Reference:
 Console doesn't have constructor. To get instance of Console you have to invoke: `System.console()`

QUESTION 5
Given:

```
11. String test = "Test A. Test B. Test C.";
12. // insert code here
13. String[] result = test.split(regex);
```

Which regular expression, inserted at line 12, correctly splits test into "Test A", "Test B", and "Test C"?

A. `String regex = "";`
B. `String regex = " ";`
C. `String regex = ".*";`
D. `String regex = "\\s";`
E. `String regex = "\\.\\s*";`
F. `String regex = "\\w[ \.] +";`

Answer: E

QUESTION 6
Given:

```
01. interface A { public void aMethod(); }
02. interface B { public void bMethod(); }
03. interface C extends A,B { public void cMethod(); }
04. class D implements B {
05. public void bMethod(){}
06. }
07. class E extends D implements C {
08. public void aMethod(){}
09. public void bMethod(){}
10. public void cMethod(){}
11. }
```

What is the result?

A. Compilation fails because of an error in line 3.
B. Compilation fails because of an error in line 7.
C. Compilation fails because of an error in line 9.
D. If you define `D e = new E()`, then e.bMethod() invokes the version of bMethod() defined in Line 5.
E. If you define `D e = (D)(new E())`, then e.bMethod() invokes the version of bMethod() defined in Line 5.
F. If you define `D e = (D)(new E())`, then e.bMethod() invokes the version of bMethod() defined in Line 9.

Answer: F

QUESTION 7
Given:

```
public class SimpleCalc {
    public value;
    public void calculate() { value += 7; }
}
```

and:

```
public class MultiCalc extends SimpleCalc {
    public void calculate() { value -= 3; }
    public void calculate(int multiplier) {
        calculate();
        super.calculate();
        value *= multiplier;
    }
    public statuc void main(String[] args) {
        MultiCalc calculator = new MultiCalc();
        calculator.calculate(2);
        System.out.println("Value is: " + calculator.value);
    }
}
```

What is the result?

A. Value is: 8
B. Compilation fails.
C. Value is: 12
D. Value is: -12
E. The code runs with no output.
F. An exception is thrown at runtime.

QUESTION 8
Given:

```
public class Base {
    public static final String FOO = "foo";

    public static void main(String[] args) {
        Base b = new Base();
        Sub s = new Sub();
        System.out.print(Base.FOO);
        System.out.print(Sub.FOO);
        System.out.print(b.FOO);
        System.out.print(s.FOO);
        System.out.print(((Base) s).FOO);
    }
}

class Sub extends Base {
    public static final String FOO = "bar";
}
```

What is the result?

A. foofoofoofoofoo
B. foobarfoobarbar
C. foobarfoofoofoo
D. foobarfoobarfoo
E. barbarbarbarbar
F. foofoofoobarbar
G. foofoofoobarfoo

Answer: D

QUESTION 9
Given:

```
class Mammal {
}

class Raccoon extends Mammal {
    Mammal m = new Mammal();
}

class BabyRaccoon extends Mammal {
}
```

Which four statements are true? (Choose four.)

A. Raccoon is-a Mammal.
B. Raccoon has-a Mammal.
C. BabyRaccoon is-a Mammal.

D. BabyRaccoon is-a Raccoon.

E. BabyRaccoon has-a Mammal.

F. BabyRaccoon is-a BabyRaccoon.

QUESTION 10
Given:

```
interface A { void x(); }
class B implements A { public void x() {} public void y() {} }
class C extends B { public void x() {} }
```

and:

```
20. java.util.List<A> list = new java.util.ArrayList<A>();
21. list.add(new B());
22. list.add(new C());
23. for (A a : list) {
24.    a.x();
25.    a.y();
26. }
```

What is the result?

A. The code runs with no output.

B. An exception is thrown at runtime.

C. Compilation fails because of an error in line 20.

D. Compilation fails because of an error in line 21.

E. Compilation fails because of an error in line 23.

F. Compilation fails because of an error in line 25.

Answer: F

QUESTION 13
Given:

```java
public class Hello {
    String title;
    int value;

    public Hello() {
        title += " World";
    }

    public Hello(int value) {
        this.value = value;
        title = "Hello";
        Hello();
    }
}
```

and:

```java
Hello c = new Hello(5);
```

```
System.out.println(c.title);
```

What is the result?

A. Hello
B. Hello World
C. Compilation fails.
D. Hello World 5
E. The code runs with no output.
F. An exception is thrown at runtime.

Answer: C
Section: All

Explanation/Reference:
 The method Hello() is undefined for type Hello. If you want this code to compile there should be `new Hello
();`

QUESTION 14
Given:

```
package geometry;

public class Hypotenuse {
    public InnerTriangle it = new InnerTriangle();

    class InnerTriangle {
        public int base;
        public int height;
    }
}
```

Which statement is true about the class of an object that can reference the variable base?

A. It can be any class.
B. No class has access to base.
C. The class must belong to the geometry package.
D. The class must be a subclass of the class Hypotenuse.

QUESTION 32
Given:

```
import java.util.TreeSet;

public class Explorer2 {
    public static void main(String[] args) {
        TreeSet<Integer> s = new TreeSet<Integer>();
        TreeSet<Integer> subs = new TreeSet<Integer>();
        for(int i = 606; i < 613; i++)
            if(i%2 == 0) s.add(i);
        subs = (TreeSet)s.subSet(608, true, 611, true);
        s.add(629);
        System.out.println(s + " " + subs);
    }
}
```

What is the result?

A. Compilation fails.
B. An exception is thrown at runtime.
C. [608, 610, 612, 629] [608, 610]
D. [608, 610, 612, 629] [608, 610, 629]
E. [606, 608, 610, 612, 629] [608, 610]
F. [606, 608, 610, 612, 629] [608, 610, 629]

Answer: E

QUESTION 33
Given:

```
public class Drink implements Comparable {
    public String name;
    public int compareTo(Object o) {
        return 0;
    }
}
```

and:

```
Drink one = new Drink();
Drink two = new Drink();
one.name= "Coffee";
two.name= "Tea";
TreeSet set = new TreeSet();
set.add(one);
set.add(two);
```

A programmer iterates over the TreeSet and prints the name of each Drink object. What is the result?

A. Tea
B. Coffee
C. Coffee
   Tea
D. Compilation fails.
E. The code runs with no output.
F. An exception is thrown at runtime.

01. import java.util.*;
02. public class Example {
03.     public static void main(String[] args) {
04.         // insert code here
05.         set.add(new Integer(2));
06.         set.add(new Integer(1));
07.         System.out.println(set);
08.     }
09. }
```

Which code, inserted at line 4, guarantees that this program will output [1, 2]?

A. `Set set = new TreeSet();`

B. `Set set = new HashSet();`

C. `Set set = new SortedSet();`

D. `List set = new SortedList();`

E. `Set set = new LinkedHashSet();`

Answer: A
Section: All

QUESTION 36
Given:

```
05. class A {
06.    void foo() throws Exception { throw new Exception(); }
07. }
08. class SubB2 extends A {
09.    void foo() { System.out.println("B "); }
10. }
11. class Tester {
12.    public static void main(String[] args) {
13.        A a = new SubB2();
14.        a.foo();
15.    }
16. }
```

What is the result?

A. B

B. B, followed by an Exception.

C. Compilation fails due to an error on line 9.

D. Compilation fails due to an error on line 14.

E. An Exception is thrown with no other output.

Answer: D
Section: All

Explanation/Reference:
Unhandled exception type Exception

QUESTION 37
Given:

```
84. try {
85.    ResourceConnection con = resourceFactory.getConnection();
86.    Results r = con.query("GET INFO FROM CUSTOMER");
87.    info = r.getData();
88.    con.close();
89. } catch (ResourceException re) {
90.    errorLog.write(re.getMessage());
91. }
92. return info;
```

Which statement is true if a ResourceException is thrown on line 86?

A. Line 92 will not execute.

B. The connection will not be retrieved in line 85.

C. The resource connection will not be closed on line 88.

D. The enclosing method will throw an exception to its caller.

Answer: C

QUESTION 38
Given:

```java
public class Breaker {
    static String o = "";

    public static void main(String[] args) {
        z: o = o + 2;
        for (int x = 3; x < 8; x++) {
            if (x == 4)
                break;
            if (x == 6)
                break z;
            o = o + x;
        }
        System.out.println(o);
    }
}
```

What is the result?

A. 23
B. 234
C. 235
D. 2345
E. 2357
F. 23457
G. Compilation fails.

Answer: G
Section: All

Explanation/Reference:
Label placed incorrectly.

QUESTION 39
Given:

```java
11.     public void go(int x) {
12.         assert (x > 0);
13.         switch(x) {
14.             case 2: ;
15.             default: assert false;
16.         }
17.     }
18.     private void go2(int x) { assert (x < 0); }
```

Which statement is true?

A. All of the assert statements are used appropriately.
B. Only the assert statement on line 12 is used appropriately.
C. Only the assert statement on line 15 is used appropriately.
D. Only the assert statement on line 18 is used appropriately.
E. Only the assert statements on lines 12 and 15 are used appropriately.
F. Only the assert statements on lines 12 and 18 are used appropriately.
G. Only the assert statements on lines 15 and 18 are used appropriately.

QUESTION 40
Given:

```java
public static void main(String[] args) {
    try {
        args = null;
        args[0] = "test";
        System.out.println(args[0]);
    } catch (Exception ex) {
        System.out.println("Exception");
    } catch (NullPointerException npe) {
        System.out.println("NullPointerException");
    }
}
```

What is the result?

A. test
B. Exception
C. Compilation fails.
D. NullPointerException

Answer: C
Section: All

Explanation/Reference:
Incorrect order of catch statements.

QUESTION 41
Given:

```java
public static void main(String[] args) {
    for (int i = 0; i <= 10; i++) {
        if (i > 6) break;
    }
    System.out.println(i);
}
```

What is the result?

A. 6
B. 7
C. 10
D. 11
E. Compilation fails.
F. An exception is thrown at runtime.

QUESTION 42
Given:

```
11. class X { public void foo() { System.out.print("X "); } }
12.
13. public class SubB extends X {
14.     public void foo() throws RuntimeException {
15.         super.foo();
16.         if (true) throw new RuntimeException();
17.         System.out.print("B ");
18.     }
19.     public static void main(String[] args) {
20.         new SubB().foo();
21.     }
22. }
```

What is the result?

A. X, followed by an Exception.
B. No output, and an Exception is thrown.
C. Compilation fails due to an error on line 14.
D. Compilation fails due to an error on line 16.
E. Compilation fails due to an error on line 17.
F. X, followed by an Exception, followed by B.

Answer: A
Section: All

Explanation/Reference:
```
 X Exception in thread "main" java.lang.RuntimeException
    at SubB.foo(SubB.java:5)
    at SubB.main(SubB.java:9)

QUESTION 48
Given:

```
public class ItemTest {
    private final int id;

    public ItemTest(int id) {
        this.id = id;
    }

    public void updateId(int newId) {
        id = newId;
    }

    public static void main(String[] args) {
        ItemTest fa = new ItemTest(42);
        fa.updateId(69);
        System.out.println(fa.id);
    }
}
```

What is the result?

A. Compilation fails.
B. An exception is thrown at runtime.
C. The attribute id in the ItemTest object remains unchanged.
D. The attribute id in the ItemTest object is modified to the new value.
E. A new ItemTest object is created with the preferred value in the id attribute.

Answer: A
Section: All

Explanation/Reference:
The final field ItemTest.id cannot be assigned

QUESTION 49
A developer is creating a class Book, that needs to access class Paper. The Paper class is deployed in a JAR named myLib.jar. Which three, taken independently, will allow the developer to use the Paper class while compiling the Book class? (Choose three.)

A. The JAR file is located at $JAVA_HOME/jre/classes/myLib.jar.
B. The JAR file is located at $JAVA_HOME/jre/lib/ext/myLib.jar..
C. The JAR file is located at /foo/myLib.jar and a classpath environment variable is set that includes /foo/myLib.jar/Paper.class.
D. The JAR file is located at /foo/myLib.jar and a classpath environment variable is set that includes /foo/myLib.jar.

E. The JAR file is located at /foo/myLib.jar and the Book class is compiled using javac - cp /foo/myLib.jar/ Paper Book.java.

F. The JAR file is located at /foo/myLib.jar and the Book class is compiled using javac -d /foo/myLib.jar Book. java

G. The JAR file is located at /foo/myLib.jar and the Book class is compiled using javac - classpath /foo/myLib. jar Book.java

QUESTION 50
Click the Exhibit button.

```
class Foo {
    private int x;
    public Foo( int x ){ this.x = x;}
    public void setX( int x ) { this.x = x; }
    public int getX(){ return x;}
}

public class Gamma {

    static Foo fooBar(Foo foo) {
        foo = new Foo(100);
        return foo;
    }

    public static void main(String[] args) {
        Foo foo = new Foo( 300 );
        System.out.println( foo.getX() + "-");

        Foo fooFoo = fooBar(foo);
        System.out.println(foo.getX() + "-");
        System.out.println(fooFoo.getX() + "-");

        foo = fooBar( fooFoo);
        System.out.println( foo.getX() + "-");
        System.out.println(fooFoo.getX());
    }
}
```

What is the output of the program shown in the exhibit?

A. 300-100-100-100-100
B. 300-300-100-100-100
C. 300-300-300-100-100
D. 300-300-300-300-100

Answer: B

Explanation/Reference:

QUESTION 51
Given classes defined in two different files:

```
package packageA;
public class Message {
    String getText() {
        return "text";
    }
}
```

And:

```
package packageB;
public class XMLMessage extends packageA.Message {
    String getText() {
        return "<msg>text</msg>";
    }

    public static void main(String[] args) {
        System.out.println(new XMLMessage().getText());
    }
}
```

What is the result of executing XMLMessage.main?

A. text
B. Compilation fails.
C. <msg>text</msg>
D. An exception is thrown at runtime.

Answer: C
Section: All

Explanation/Reference:

QUESTION 52
Given:

```
interface Fish {
}

class Perch implements Fish {
}

class Walleye extends Perch {
}

class Bluegill {
}

public class Fisherman {
    public static void main(String[] args) {
        Fish f = new Walleye();
        Walleye w = new Walleye();
        Bluegill b = new Bluegill();
```

```
        if (f instanceof Perch)
            System.out.print("f-p ");
        if (w instanceof Fish)
            System.out.print("w-f ");
        if (b instanceof Fish)
            System.out.print("b-f ");
    }
}
```

What is the result?

A. w-f
B. f-p w-f
C. w-f b-f
D. f-p w-f b-f
E. Compilation fails.
F. An exception is thrown at runtime.

Answer: B

QUESTION 53
Given:

```
package com.company.application;

public class MainClass {
    public static void main(String[] args) {
    }
}
```

and MainClass exists in the /apps/com/company/application directory. Assume the CLASSPATH environment variable is set to "." (current directory). Which two java commands entered at the command line will run MainClass? (Choose two.)

A. `java MainClass` if run from the /apps directory
B. `java com.company.application.MainClass` if run from the /apps directory
C. `java -classpath /apps com.company.application.MainClass` if run from any directory
D. `java -classpath . MainClass` if run from the /apps/com/company/application directory
E. `java -classpath /apps/com/company/application:. MainClass` if run from the /apps directory
F. `java com.company.application.MainClass` if run from the /apps/com/company/application directory

QUESTION 55
Given:

```
public class TestSeven extends Thread {
    private static int x;
    public synchronized void doThings() {
        int current = x;
        current++;
        x = current;
    }
    public void run() {
        doThings();
    }
}
```

Which statement is true?

A. Compilation fails.
B. An exception is thrown at runtime.
C. Synchronizing the run() method would make the class thread-safe.
D. The data in variable "x" are protected from concurrent access problems.
E. Declaring the doThings() method as static would make the class thread-safe.
F. Wrapping the statements within doThings() in a synchronized(new Object()) { } block would make the class thread-safe.

1. public class KungFu {
2.     public static void main(String[] args) {
3.         Integer x = 400;
4.         Integer y = x;
5.         x++;
6.         StringBuilder sb1 = new StringBuilder("123");
7.         StringBuilder sb2 = sb1;
8.         sb1.append("5");
9.         System.out.println((x == y) + " " + (sb1 == sb2));
10.     }
11.}
```

What is the result?

A. true true
B. false true
C. true false
D. false false
E. Compilation fails.

F. An exception is thrown at runtime.

Answer: B
Section: All

Explanation/Reference:

QUESTION 3
Given:

```
11. class Converter {
12.     public static void main(String[] args) {
13.         Integer i = args[0];
14.         int j = 12;
15.         System.out.println("It is " + (j == i) + " that j==i.");
16.     }
17. }
```

What is the result when the programmer attempts to compile the code and run it with the command java Converter 12?

A. It is true that j==i.
B. It is false that j==i.
C. An exception is thrown at runtime.
D. Compilation fails because of an error in line 13.

Answer: D
Section: All

Explanation/Reference:
`Integer i = args[0];` Type mismatch: cannot convert from String to Integer

QUESTION 4
Given

```
1. public class A {
2.     public String doit(int x, int y){
3.         return "a";
4.     }
5.
6.     public String doit(int... vals){
7.         return "b";
8.     }
9. }
```

and:

```
25.    A a = new A();
26.    System.out.println(a.doit(4, 5));
```

What is the result?

A. Line 26 prints "a" to System.out.

B. Line 26 prints "b" to System.out.
C. An exception is thrown at line 26 at runtime.
D. Compilation of class A will fail due to an error in line 6.

Answer: A
Section: All

Explanation/Reference:

QUESTION 5
Which two code fragments correctly create and initialize a static array of int elements? (Choose two.)

A. `static final int[] a = { 100,200 };`
B. `static final int[] a; static { a=new int[2]; a[0]=100; a[1]=200; }`
C. `static final int[] a = new int[2]{ 100,200 };`
D. `static final int[] a;`
   `static void init() { a = new int[3]; a[0]=100; a[1]=200; }`

Answer: AB
Section: All

Explanation/Reference:
`static final int[] a = new int[2]{ 100,200 };` - Cannot define dimension expression when an array initializer is provided.
`static final int[] a;` - the blank final field may not have been initialized
`static void init() { a = new int[3]; a[0]=100; a[1]=200; }` - the final field a cannot be assigned

QUESTION 6
Given:

```
1. public class Plant {
2.     private String name;
3.
4.     public Plant(String name) {
5.         this.name = name;
6.     }
7.
8.     public String getName() {
9.         return name;
10.     }
11. }
```

```
1. public class Tree extends Plant {
2.     public void growFruit() {
3.     }
4.
5.     public void dropLeaves() {
6.     }
7. }
```

Which statement is true?

A. The code will compile without changes.
B. The code will compile if public Tree() { Plant(); } is added to the Tree class.
C. The code will compile if public Plant() { Tree(); } is added to the Plant class.
D. The code will compile if public Plant() { this("fern"); } is added to the Plant class.
E. The code will compile if public Plant() { Plant("fern"); } is added to the Plant class.

Answer: D

QUESTION 7
Click the Exhibit button.

```
1.  public class GoTest {
2.      public static void main(String[] args) {
3.          Sente a = new Sente(); a.go();
4.          Goban b = new Goban(); b.go();
5.          Stone c = new Stone(); c.go();
6.      }
7.  }
8.
9.  class Sente implements Go {
10.     public void go(){
11.         System.out.println("go in Sente");
12.     }
13. }
14.
15. class Goban extends Sente {
16.     public void go(){
17.         System.out.println("go in Goban");
18.     }
19.
20. }
21. class Stone extends Goban implements Go{
22. }
23.
24. interface Go { public void go(); }
```

What is the result?

A. go in Goban go in Sente go in Sente
B. go in Sente go in Sente go in Goban
C. go in Sente go in Goban go in Goban
D. go in Goban go in Goban go in Sente
E. Compilation fails because of an error in line 17.

Answer: C

QUESTION 8
Given:

```java
public interface A111 {
    String s = "yo";

    public void method1();
}

interface B {
}

interface C extends A111, B {
    public void method1();

    public void method1(int x);
}
```

What is the result?

A. Compilation succeeds.
B. Compilation fails due to multiple errors.
C. Compilation fails due to an error only on line 20.
D. Compilation fails due to an error only on line 21.
E. Compilation fails due to an error only on line 22.
F. Compilation fails due to an error only on line 12.

Answer: A

QUESTION 9
Click the Exhibit button.

```java
10. interface Foo{
11.     int bar();
12. }
13.
14. public class Beta {
15.
16.     class A implements Foo {
17.         public int bar(){ return 1; }
18.     }
19.
20.     public int fubar(Foo foo){ return foo.bar(); }
21.
22.     public void testFoo(){
23.
24.         class A implements Foo{
25.             public int bar(){return 2;}
26.         }
27.
28.         System.out.println(fubar(new A()));
29.     }
```

```
30.
31.    public static void main(String[] args) {
32.        new Beta().testFoo();
33.    }
34. }
```

Which three statements are true? (Choose three.)

A. Compilation fails.
B. The code compiles and the output is 2.
C. If lines 16, 17 and 18 were removed, compilation would fail.
D. If lines 24, 25 and 26 were removed, compilation would fail.
E. If lines 16, 17 and 18 were removed, the code would compile and the output would be 2.
F. If lines 24, 25 and 26 were removed, the code would compile and the output would be 1.

Answer: BEF

QUESTION 10
Given:

```
class Alpha {
    public void foo() { System.out.print("Afoo "); }
}
public class Beta extends Alpha {
    public void foo() { System.out.print("Bfoo "); }
    public static void main(String[] args) {
        Alpha a = new Beta();
        Beta b = (Beta)a;
        a.foo();
        b.foo();
    }
}
```

What is the result?

A. Afoo Afoo
B. Afoo Bfoo
C. Bfoo Afoo
D. Bfoo Bfoo
E. Compilation fails.
F. An exception is thrown at runtime.

Answer: D
Section: All

QUESTION 13
Given:

```java
public class NamedCounter {
    private final String name;
    private int count;

    public NamedCounter(String name) {
        this.name = name;
    }

    public String getName() {
        return name;
    }

    public void increment() {
        count++;
    }

    public int getCount() {
        return count;
    }

    public void reset() {
        count = 0;
    }
}
```

Which three changes should be made to adapt this class to be used safely by multiple threads? (Choose three.)

A. declare reset() using the synchronized keyword
B. declare getName() using the synchronized keyword
C. declare getCount() using the synchronized keyword
D. declare the constructor using the synchronized keyword
E. declare increment() using the synchronized keyword

QUESTION 14
Given that Triangle implements Runnable, and:

```java
    void go() throws Exception {
        Thread t = new Thread(new Triangle());
        t.start();
        for(int x = 1; x < 100000; x++) {
            //insert code here line 35
            if(x%100 == 0) System.out.print("g");
        }
    }

    public void run() {
        try {
            for(int x = 1; x < 100000; x++) {
                // insert the same code here line 41
                if(x%100 == 0) System.out.print("t");
            }
```

```
        } catch (Exception e) {

        }
    }
```

Which two statements, inserted independently at both lines 35 and 41, tend to allow both threads to temporarily pause and allow the other thread to execute? (Choose two.)

A. Thread.wait();
B. Thread.join();
C. Thread.yield();
D. Thread.sleep(1);
E. Thread.notify();

Answer: CD

Explanation/Reference:

QUESTION 15
Given:

```
public class Yikes {

    public static void go(Long n) {
        System.out.print("Long ");
    }

    public static void go(Short n) {
        System.out.print("Short ");
    }

    public static void go(int n) {
        System.out.print("int ");
    }

    public static void main(String[] args) {
        short y = 6;
        long z = 7;
        go(y);
        go(z);
    }
}
```

What is the result?

A. int Long
B. Short Long
C. Compilation fails.
D. An exception is thrown at runtime.

Answer: A
Section: All

QUESTION 16
Given:

```
12. Date date = new Date();
13. df.setLocale(Locale.ITALY);
14. String s = df.format(date);
```

The variable df is an object of type DateFormat that has been initialized in line 11. What is the result if this code is run on December 14, 2000?

A. The value of s is 14-dic-2000.
B. The value of s is Dec 14, 2000.
C. An exception is thrown at runtime.
D. Compilation fails because of an error in line 13.

Answer: D
Section: All

Explanation/Reference:
The method setLocale(Locale) is undefined for the type DateFormat. It should be done in line 11 like this
```
DateFormat df = DateFormat.getDateInstance(DateFormat.LONG, Locale.ITALY);
```

QUESTION 17
Which two scenarios are NOT safe to replace a StringBuffer object with a StringBuilder object? (Choose two.)

A. When using versions of Java technology earlier than 5.0.
B. When sharing a StringBuffer among multiple threads.
C. When using the java.io class StringBufferInputStream.
D. When you plan to reuse the StringBuffer to build more than one string.

Answer: AB
Section: All

Explanation/Reference:

QUESTION 18
Given that c is a reference to a valid java.io.Console object, and:

```
11. String pw = c.readPassword("%s", "pw: ");
12. System.out.println("got " + pw);
13. String name = c.readLine("%s", "name: ");
14. System.out.println(" got ", name);
```

If the user types fido when prompted for a password, and then responds bob when prompted for a name, what is the result?

A. pw: got fido name: bob got bob
B. pw: fido got fido name: bob got bob

C. pw: got fido name: bob got bob

D. pw: fido got fido name: bob got bob

E. Compilation fails.

F. An exception is thrown at runtime.

Answer: E
Section: All

Explanation/Reference:
There are two compilation errors:
line 11: Type mismatch: cannot convert from char[] to String
line 14: The method println(String) in the type PrintStream is not applicable for the arguments (String, String)

QUESTION 19
Given:

```
11. String test = "This is a test";
12. String[] tokens = test.split("\s");
13. System.out.println(tokens.length);
```

What is the result?

A. 0

B. 1

C. 4

D. Compilation fails.

E. An exception is thrown at runtime.

Answer: D
Section: All

Explanation/Reference:
line 12: Invalid escape sequence (valid ones are \b \t \n \f \r \" \' \\ )
You have to add another "\" to correctly escape it.

QUESTION 20
Given:

```
import java.io.*;

class Animal {
    Animal() {
        System.out.print("a");
    }
}

class Dog extends Animal implements Serializable {
    Dog() {
        System.out.print("d");
    }
}

public class Beagle extends Dog {
}
```

If an instance of class Beagle is created, then Serialized, then deSerialized, what is the result?

A. ad
B. ada
C. add
D. adad
E. Compilation fails.
F. An exception is thrown at runtime.

Answer: B
Section: All

Explanation/Reference:

QUESTION 21
A team of programmers is involved in reviewing a proposed design for a new utility class. After some discussion, they realize that the current design allows other classes to access methods in the utility class that should be accessible only to methods within the utility class itself. What design issue has the team discovered?

A. Tight coupling
B. Low cohesion
C. High cohesion
D. Loose coupling
E. Weak encapsulation
F. Strong encapsulation

Answer: E

QUESTION 22
Given a method that must ensure that its parameter is not null:

```
11. public void someMethod(Object value) {
12. // check for null value
...
20. System.out.println(value.getClass());
21. }
```

What, inserted at line 12, is the appropriate way to handle a null value?

A. assert value == null;
B. assert value != null, "value is null";
C. if (value == null) { throw new AssertionException("value is null"); }
D. if (value == null) { throw new IllegalArgumentException("value is null"); }

Answer: D
Section: All

Explanation/Reference:

QUESTION 23
Given:

```
1. public class Target {
2.     private int i = 0;
3.     public int addOne() {
4.         return ++i;
5.     }
6. }
```

And:

```
1. public class Client {
2.     public static void main(String[] args){
3.         System.out.println(new Target().addOne());
4.     }
5. }
```

Which change can you make to Target without affecting Client?

A. Line 4 of class Target can be changed to return i++;
B. Line 2 of class Target can be changed to private int i = 1;
C. Line 3 of class Target can be changed to private int addOne(){
D. Line 2 of class Target can be changed to private Integer i = 0;

Answer: D
Section: All

Explanation/Reference:

QUESTION 24
Given:

```
class Animal {
    public String noise() {
        return "peep";
    }
}

class Dog extends Animal {
    public String noise() {
        return "bark";
    }
}

class Cat extends Animal {
    public String noise() {
        return "meow";
    }
}

30. Animal animal = new Dog();
```

```
31. Cat cat = (Cat)animal;
32. System.out.println(cat.noise());
```

What is the result?

A. peep
B. bark
C. meow
D. Compilation fails.
E. An exception is thrown at runtime.

Answer: E
Section: All

Explanation/Reference:
```
Exception in thread "main" java.lang.ClassCastException: Dog cannot be cast to
Cat
    at Client.main(Client.java:12)
```

QUESTION 25
Given:

```
abstract class A {
    abstract void a1();

    void a2() {
    }
}

class B extends A {
    void a1() {
    }

    void a2() {
    }
}

class C extends B {
    void c1() {
    }
}
```

And:

```
A x = new B();
C y = new C();
A z = new C();
```

What are four valid examples of polymorphic method calls? (Choose four.)

A. x.a2();
B. z.a2();
C. z.c1();
D. z.a1();
E. y.c1();
F. x.a1();

QUESTION 28
Given:

```
class Pizza {
    java.util.ArrayList toppings;

    public final void addTopping(String topping) {
        toppings.add(topping);
    }
    public void removeTopping(String topping) {
        toppings.remove(topping);
    }
}

public class PepperoniPizza extends Pizza {
    public void addTopping(String topping) {
        System.out.println("Cannot add Toppings");
```

```
    }

    public static void main(String[] args) {
        Pizza pizza = new PepperoniPizza();
        pizza.addTopping("Mushrooms");
        pizza.removeTopping("Peperoni");
    }
}
```

What is the result?

A. Compilation fails.
B. Cannot add Toppings
C. The code runs with no output.
D. A NullPointerException is thrown in Line 4.

Answer: A

QUESTION 30
Click the Exhibit button.

```
1. public class Car {
2.     private int wheelCount;
3.     private String vin;
4.     public Car(String vin){
5.         this.vin = vin;
6.         this.wheelCount = 4;
7.     }
8.     public String drive(){
9.         return "zoom-zoom";
```

```
10.    }
11.    public String getInfo() {
12.        return "VIN: " + vin + " wheels: " + wheelCount;
13.    }
14.}
```

And

```
1. public class MeGo extends Car {
2.     public MeGo(String vin) {
3.         this.wheelCount = 3;
4.     }
5. }
```

What two must the programmer do to correct the compilation errors? (Choose two.)

A. insert a call to this() in the Car constructor
B. insert a call to this() in the MeGo constructor
C. insert a call to super() in the MeGo constructor
D. insert a call to super(vin) in the MeGo constructor
E. change the wheelCount variable in Car to protected
F. change line 3 in the MeGo class to super.wheelCount = 3;

Answer: DE

4.     public static void main(String[] args) {
5.         TreeSet<Integer> s = new TreeSet<Integer>();
6.         TreeSet<Integer> subs = new TreeSet<Integer>();
7.         for (int i = 606; i < 613; i++)
8.             if (i % 2 == 0)
9.                 s.add(i);
10.        subs = (TreeSet) s.subSet(608, true, 611, true);
11.        subs.add(629);
12.        System.out.println(s + " " + subs);
13.    }
14. }
```

What is the result?

A. Compilation fails.
B. An exception is thrown at runtime.
C. [608, 610, 612, 629] [608, 610]
D. [608, 610, 612, 629] [608, 610, 629]
E. [606, 608, 610, 612, 629] [608, 610]
F. [606, 608, 610, 612, 629] [608, 610, 629]

Answer: B

QUESTION 40
Click the Exhibit button

```
1. public class A {
2.     public void method1(){
3.         B b = new B();
4.         b.method2();
5.         // more code here
6.     }
7. }
```

```
1. public class B{
2.     public void method2() {
3.         C c = new C();
4.         c.method3();
5.         // more code here
6.     }
7. }
```

```
1. public class C {
2.     public void method3(){
3.         // more code here
4.     }
5. }
```

Given:

```
25. try {
26.     A a = new A();
27.     a.method1();
28. } catch (Exception e) {
29.     System.out.print("an error occurred");
30. }
```

Which two statements are true if a NullPointerException is thrown on line 3 of class C? (Choose two.)

A. The application will crash.
B. The code on line 29 will be executed.
C. The code on line 5 of class A will execute.
D. The code on line 5 of class B will execute.
E. The exception will be propagated back to line 27.

QUESTION 44
Given:

```
    public static void main(String[] args) {
        String str = "null";
        if (str == null) {
            System.out.println("null");
        } else (str.length() == 0) {
            System.out.println("zero");
```

```
        } else {
            System.out.println("some");
        }
    }
```

What is the result?

A. null
B. zero
C. some
D. Compilation fails.
E. An exception is thrown at runtime.

Answer: D
Section: All

Explanation/Reference:
Incorrect else syntax.

QUESTION 45
Given:

```
import java.io.IOException;
class A {
    public void process() {
        System.out.print("A,");
    }
}

13. class B extends A {
14.     public void process() throws IOException {
15.         super.process();
16.         System.out.print("B,");
17.         throw new IOException();
18.     }
19.
20.     public static void main(String[] args) {
21.         try {
22.             new B().process();
23.         } catch (IOException e) {
24.             System.out.println("Exception");
25.         }
26.     }
27.}
```

What is the result?

A. Exception
B. A,B,Exception
C. Compilation fails because of an error in line 20.
D. Compilation fails because of an error in line 14.
E. A NullPointerException is thrown at runtime.

Answer: D
Section: All

Explanation/Reference:
Exception IOException is not compatible with throws clause in A.process()

QUESTION 46
Given:

```
11. public void genNumbers() {
12.         ArrayList numbers = new ArrayList();
13.         for (int i = 0; i < 10; i++) {
14.             int value = i * ((int) Math.random());
15.             Integer intObj = new Integer(value);
16.             numbers.add(intObj);
17.         }
18.         System.out.println(numbers);
19. }
```

Which line of code marks the earliest point that an object referenced by intObj becomes a candidate for garbage collection?

A. Line 16

B. Line 17

C. Line 18

D. Line 19

E. The object is NOT a candidate for garbage collection.

Answer: D
Section: All

Explanation/Reference:

QUESTION 47
Given:

```
1. public class GC {
2.     private Object o;
3.     private void doSomethingElse(Object obj) { o = obj; }
4.     public void doSomething() {
5.         Object o = new Object();
6.         doSomethingElse(o);
7.         o = new Object();
8.         doSomethingElse(null);
9.         o = null;
10.     }
11.}
```

When the doSomething method is called, after which line does the Object created in line 5 become available for garbage collection?

A. Line 5

B. Line 6

C. Line 7

D. Line 8

E. Line 9

F. Line 10

Answer: D

 ^ - XOR - returns true if (false ^ true), (true ^ false)

QUESTION 49
Given:

```java
1. interface DeclareStuff {
2.      public static final int EASY = 3;
3.
4.      void doStuff(int t);
5. }
6.
7. public class TestDeclare implements DeclareStuff {
8.      public static void main(String[] args) {
9.          int x = 5;
10.         new TestDeclare().doStuff(++x);
11.     }
12.
```

```
13.    void doStuff(int s) {
14.        s += EASY + ++s;
15.        System.out.println("s " + s);
16.    }
17. }
```

What is the result?

A. s 14
B. s 16
C. s 10
D. Compilation fails.
E. An exception is thrown at runtime.

Answer: D
Section: All

Explanation/Reference:
 Cannot reduce the visibility of the inherited method from DeclareStuff

QUESTION 50
A class games.cards.Poker is correctly defined in the jar file Poker.jar. A user wants to execute the main method of Poker on a UNIX system using the command:

```
java games.cards.Poker
```

What allows the user to do this?

A. put Poker.jar in directory /stuff/java, and set the CLASSPATH to include /stuff/java
B. put Poker.jar in directory /stuff/java, and set the CLASSPATH to include /stuff/java/*.jar
C. put Poker.jar in directory /stuff/java, and set the CLASSPATH to include /stuff/java/Poker.jar
D. put Poker.jar in directory /stuff/java/games/cards, and set the CLASSPATH to include /stuff/java
E. put Poker.jar in directory /stuff/java/games/cards, and set the CLASSPATH to include /stuff/java/*.jar
F. put Poker.jar in directory /stuff/java/games/cards, and set the CLASSPATH to include /stuff/java/Poker.jar

QUESTION 5

Given the class definitions:

```
class Animal { }
class Dog extends Animal { }
```

and the code:

```
public void go() {
  ArrayList<Dog> aList = new ArrayList<Dog>();
  takeList(aList);
}
// insert definition of the takeList() method here
```

Place the correct Compilation Result on each takeList() method definition to
indicate whether or not the go() method would compile given that definition.

takeList() Method Definition

```
public void takeList(ArrayList list) { }
```

```
public void takeList(ArrayList<Animal> list) { }
```

```
public void takeList(ArrayList<? extends Animal> list) { }
```

```
public void takeList(ArrayList<?> list) { }
```

```
public void takeList(ArrayList<Object> list) { }
```

Compilation Result

Compilation succeeds.

Compilation fails.

Answer:

Given the class definitions:

```
class Animal { }
class Dog extends Animal { }
```

and the code:

```
public void go() {
    ArrayList<Dog> aList = new ArrayList<Dog>();
    takeList(aList);
}
// insert definition of the takeList() method here
```

Place the correct Compilation Result on each takeList() method definition to indicate whether or not the go() method would compile given that definition.

takeList() Method Definition

| Compilation succeeds. |
| Compilation fails. |
| Compilation succeeds. |
| Compilation succeeds. |
| Compilation fails. |

Compilation Result

| Compilation succeeds. |
| Compilation fails. |

QUESTION 6

Place the code in the appropriate places such that this program will always output [1, 2].

```
import java.util.*;

public class MyInt [Place here]    [Place here]    {
    public static void main(String[] args) {
        ArrayList<MyInt> list = new ArrayList<MyInt>();
        list.add(new MyInt(2));
        list.add(new MyInt(1));
        Collections.sort(list);
        System.out.println(list);
    }
    private int i;
    public MyInt(int i) { this.i = i; }
    public String toString() { return Integer.toString(i); }

    [Place here]   int [Place here]    {

    MyInt i2 = (MyInt)o;

    return [Place here]   ;
    }
}
```

Code

implements	extends	Sortable	Object	Comparable
protected	public	i - i2 i	i	i2 i - i

compare(MyInt o, MyInt i2)	compare(Object o, Object i2)
sort(Object o)	sort(MyInt o)
compareTo(MyInt o)	compareTo(Object o)

Answer:

Place the code in the appropriate places such that this program will always output [1, 2].

```
import java.util.*;

public class MyInt [implements] [Comparable] {
    public static void main(String[] args) {
        ArrayList<MyInt> list = new ArrayList<MyInt>();
        list.add(new MyInt(2));
        list.add(new MyInt(1));
        Collections.sort(list);
        System.out.println(list);
    }
    private int i;
    public MyInt(int i) { this.i = i; }
    public String toString() { return Integer.toString(i); }

    [public] int [compareTo(Object o)] {
        MyInt i2 = (MyInt)o;
        return [i - i2.i] ;
    }
}
```

Code

extends	Sortable	Object	
protected		i	i2 i - i
compare(MyInt o, MyInt i2)	compare(Object o, Object i2)		
sort(Object o)	sort(MyInt o)		
compareTo(MyInt o)

QUESTION 8

Replace two of the Modifiers that appear in the `Single` class to make the code compile.
Note: Three modifiers will not be used and four modifiers in the code will remain unchanged.

Code

```
public class Single {
    private   static   Single instance;
    public    static   Single getInstance() {
        if (instance == null) instance = create();
        return instance;
    }
    private Single() { }
    protected Single create() { return new Single(); }
}

class SingleSub extends Single {
}
```

Modifiers

final
protected
private
abstract
static

Done

Answer:

Replace two of the Modifiers that appear in the `Single` class to make the code compile.
Note: Three modifiers will not be used and four modifiers in the code will remain unchanged.

Code

```
public class Single {

    private    static    Single instance;
    public     static    Single getInstance() {
        if (instance == null) instance = create();
        return instance;
    }
    protected Single() { }
    static     Single create() { return new Single(); }

}

class SingleSub extends Single {
}
```

Modifiers

```
final

private
abstract
```

[Done]

QUESTION 9

Place the Fragments into the program, so that the program will get lines from a text file, display them, and then close all the resources.

Program

```
import java.io.*

public class ReadFile {
    public static void main(String [] args) {

        try {
            File  ? = new File("MyText.txt");
            Place here    ? = new    Place here    (x1);
            Place here    x4 = new    Place here    (x2);
            String x3 = null;
            while (( x3 =  ? . Place here    ()) != null) {
                System.out.println(x3);
            }  ? . Place here    ();
        } catch(Exception ex) {
            ex.printStackTrace();
        }
    }
}
```

Code Fragments

```
BufferedReader
StreamReader
FileReader
readLine
readLn
read
closeFile
close
x1    x2
x3    x4
```

[Done]

Answer:

Place the Fragments into the program, so that the program will get lines from a text file, display them, and then close all the resources.

Program

Code Fragments

```
import java.io.*

public class ReadFile {
   public static void main(String [] args) {

      try {
         File  x1  = new File("MyText.txt");
         FileReader   x2  = new    FileReader  (x1);
         BufferedReader  x4 = new  BufferedReader (x2);
         String x3 = null;
         while (( x3 =  x4 .   readLine  ()) != null) {
            System.out.println(x3);

QUESTION 10

Given: `public class Doubler {`
`    public static int doubleMe( Holder h) {`
`        return h.getAmount() * 2;`
`    }`
`}`

and:
`public class Holder {`
`    int amount = 10;`
`    public void doubleAmount(){ amount = Doubler.doubleMe( this );}`
`    public int getAmount(){ return amount;}`
`    //more code here`
`}`

Place the code fragments in position to reduce the coupling between Doubler and Holder.

`public class Doubler {`
`    public static int doubleMe(` [Place here] `h) {`
`        return` [Place here] `* 2;`
`    }`
`}`

`public class Holder {`
`    int amount = 10;`
`    public void doubleAmount(){ amount = Doubler.doubleMe(` [Place here] `);}`
`    public int getAmount(){ return amount;}`
`    //more code here`
`}`

Code Fragments

void	Holder	int	Doubler
h.getAmount()	h	this	amount

[Done]

Answer:

Given: `public class Doubler {`
`    public static int doubleMe( Holder h) {`
`        return h.getAmount() * 2;`
`    }`
`}`

and:
`public class Holder {`
`    int amount = 10;`
`    public void doubleAmount(){ amount = Doubler.doubleMe( this );}`
`    public int getAmount(){ return amount;}`
`    //more code here`
`}`

Place the code fragments in position to reduce the coupling between Doubler and Holder.

`public class Doubler {`
`    public static int doubleMe(` [int] `h) {`
`        return` [h] `* 2;`
`    }`
`}`

`public class Holder {`
`    int amount = 10;`
`    public void doubleAmount(){ amount = Doubler.doubleMe(` [amount] `);}`
`    public int getAmount(){ return amount;}`
`    //more code here`
`}`

Code Fragments

void	Holder		Doubler
h.getAmount()		this	

[Done]

QUESTION 11

Place the code elements into the class so that the code compiles and prints "Run. Run. dolt." in exactly that order. Note that there may be more than one correct solution.

```
public class TesTwo extends Thread {
  public static void main (String[] a) throws Exception {
    TesTwo t = new TesTwo();
    t.start();
        [ Place here ]
        [ Place here ]
  }   [ Place here ]
  public void run() {
    System.out.print("Run. ");
  }
  public void doIt() {
    System.out.print("doIt. ");
  }
}
```

Code Elements

t.start();	t.join();	t.pause(10);	run();
t.run();	t.doIt();	doIt();	

Answer:

Place the code elements into the class so that the code compiles and prints "Run. Run. doIt." in exactly that order. Note that there may be more than one correct solution.

```
public class TesTwo extends Thread {
  public static void main (String[] a) throws Exception {
    TesTwo t = new TesTwo();
    t.start();
    t.run();
    t.join();
  }  t.doIt();
  public void run() {
    System.out.print("Run. ");
  }
  public void doIt() {
    System.out.print("doIt. ");
  }
}
```

Code Elements

| t.start(); | | t.pause(10); | run(); | |
| | | doIt(); | | |

QUESTION 12

Given:

```
1.  import java.util.*;
2.  class A { }
3.  class B extends A { }
4.  public class Test {
5.     public static void main(String[] args) {
6.        List<A> listA = new LinkedList<A>();
7.        List<B> listB = new LinkedList<B>();
8.        List<Object> listO = new LinkedList<Object>();
9.        // insert code here
10.    }
11.    public static void m1(List<? extends A> list) { }
12.    public static void m2(List<A> list) { }
13. }
```

Place a result onto each method call to indicate what would happen if the method call were inserted at line 9. Note: Results can be used more than once.

Method Calls		Result
m1(listA);	m2(listA);	Does not compile.
m1(listB);	m2(listB);	Compiles and runs without error.
m1(listO);	m2(listO);	An exception is thrown at runtime.

Answer:

Given:

```
1.  import java.util.*;
2.  class A { }
3.  class B extends A { }
4.  public class Test {
5.     public static void main(String[] args) {
6.        List<A> listA = new LinkedList<A>();
7.        List<B> listB = new LinkedList<B>();
8.        List<Object> listO = new LinkedList<Object>();
9.        // insert code here
10.    }
11.    public static void m1(List<? extends A> list) { }
12.    public static void m2(List<A> list) { }
13. }
```

Place a result onto each method call to indicate what would happen if the method call were inserted at line 9. Note: Results can be used more than once.

Method Calls		Result
Compiles and runs without error.	Compiles and runs without error.	Does not compile.
Compiles and runs without error.	Does not compile.	Compiles and runs without error.
Does not compile.	Does not compile.	An exception is thrown at runtime.

QUESTION 13

Given: NumberNames nn = new NumberNames();
        nn.put("one", 1);
        System.out.println(nn.getNames());

Place the code into position to create a class that maps from Strings to integer values.
The result of execution must be [one]. Some options may be used more than once.

```
public class NumberNames {
    private HashMap< [Place here] , [Place here] > map =
          new HashMap< [Place here] , [Place here] [Place here] ;
    public void put(String name, int value) {
        map.put( [Place here] , [Place here] );
    }
    public [Place here] getNames() {
        return map.keySet();
    }
}
```

Code

Set<int>	Set<Integer>	HashSet
Set<Integer,String>	Set<int, String>	Set<String,Integer>
Set<String, int>	Set<String>	NumberNames
String	Integer	int	>
>()	name	value	map

Answer:

```
Given: NumberNames nn = new NumberNames();
       nn.put("one", 1);
       System.out.println(nn.getNames());
```

Place the code into position to create a class that maps from Strings to integer values.
The result of execution must be [one]. Some options may be used more than once.

```
        public class NumberNames {
            private HashMap< String , Integer > map =
                new HashMap< String , Integer >() ;
            public void put(String name, int value) {
              map.put( name , value );
            }
            public Set<String> getNames() {
              return map.keySet();
            }
        }
```

Code

Set<int>	Set<Integer>	HashSet

Set<Integer,String>	Set<int, String>	Set<String,Integer>

Set<String, int>	Set<String>	NumberNames

String	Integer	int	>

>()	name	value	map

QUESTION 14

Place each Collection Type on its function. Note: Not all functions will be used.

Function	Collection Type
provides array manipulation utilities	java.util.SortedSet
provides collection manipulation utilities	java.util.Arrays
defines base methods for all array objects	java.util.Iterator
defines base methods for all collection objects	java.util.TreeSet
provides a concrete implementation of an ordered set	java.util.Collection
defines base methods for an ordered set	
defines methods for linear access to a collection	
defines methods for random access to a collection	

Answer:

Place each Collection Type on its function. Note: Not all functions will be used.

Function	Collection Type
java.util.Arrays	
provides collection manipulation utilities	
defines base methods for all array objects	
java.util.Collection	
java.util.TreeSet	
java.util.SortedSet	
java.util.Iterator	
defines methods for random access to a collection

QUESTION 16

Place the lines in the correct order to complete the enum.

```
enum Element {
```

| 1st |
| 2nd |
| 3rd |
| 4th |
| 5th |

Lines

```
public String info() { return "element"; }
```

```
};
```

```
FIRE { public String info() { return "Hot"; }
```

```
EARTH, WIND,
```

```
}
```

Answer:

Place the lines in the correct order to complete the enum.

```
enum Element {
```

```
EARTH, WIND,
```

```
FIRE { public String info() { return "Hot"; }
```

```
}
```

```
};
```

```
public String info() { return "element"; }
```

QUESTION 18

The doesFileExist method takes an array of directory names representing a path from the root filesystem and a file name. The method returns true if the file exists, false if it does not.

Place the code fragments in position to complete this method.

```
public static boolean doesFileExist(String[] directories, String filename) {

        Place here

    for ( String dir : directories ) {

            Place here

    }

        Place here

        Place here

}
```

Code Fragments

path = path.getSubdirectory(dir);	return ! file.isNew();	return (file != null);
String path = "";	path = path.getFile(filename);	File path = new File("");
return file.exists();	return path.isFile();	File file = new File(path, filename);
path = new File(path, dir);	File path = new File(File.separator);	path = path + File.separator + dir;

Answer:

The doesFileExist method takes an array of directory names representing a path from the root filesystem and a file name. The method returns true if the file exists, false if it does not.

Place the code fragments in position to complete this method.

```
public static boolean doesFileExist(String[] directories, String filename) {

        String path = "";

    for ( String dir : directories ) {

        path = path + File.separator + dir;

    }

    File file = new File(path, filename);

        return file.exists();

}
```

Code Fragments

path = path.getSubdirectory(dir);	return ! file.isNew();	return (file != null);
	path = path.getFile(filename);	File path = new File("");
	return path.isFile();	
path = new File(path, dir);	File path = new File(File.separator);

QUESTION 19

Place the code fragments into position to use a BufferedReader to read in an entire text file.

```
class PrintFile {
    public static void main(String[] args){
        BufferedReader buffReader = null;
        //more code here to initialize buffReader
        try {
            String temp;

            while(  [Place here]           [Place here]        ) {
                System.out.println(temp);
            }
        } catch   [Place here]
            e.printStackTrace();
        }
    }
}
```

Code Fragments

(temp = buffReader.readLine())	& & buffReader.hasNext()
(temp = buffReader.nextLine())	(IOException e){
!= null	(FileNotFoundException e){

Answer:

Place the code fragments into position to use a BufferedReader to read in an entire text file.

```
class PrintFile {
    public static void main(String[] args){
        BufferedReader buffReader = null;
        //more code here to initialize buffReader
        try {
            String temp;

            while(  (temp = buffReader.readLine())        != null       ) {
                System.out.println(temp);
            }
        } catch   (IOException e ){
            e.printStackTrace();
        }
    }
}
```

QUESTION 22

Place the code into the GenericB class definition to make the class compile successfully.

```
import java.util.*;

public class GenericB<      Place      > {

  public Place foo;

  public void setFoo(Place      foo) {
    this.foo = foo;
  }

  public    Place    getFoo() {

    return foo;
  }

  public static void main (String[] args) {
    GenericB<Cat> bar = new GenericB<Cat>();
    bar.setFoo(new Cat());
    Cat c = bar.getFoo();
  }
}

interface Pet { }
class Cat implements Pet{ }
```

Code

```
? extends Pet
T extends Pet
? implements Pet
T implements Pet
Pet extends T

?
T
<?>
Pet
```

Answer:

Place the code into the GenericB class definition to make the class compile successfully.

```
import java.util.*;

public class GenericB<   T extends Pet   > {

  public   T   foo;

  public void setFoo(   T      foo) {
    this.foo = foo;
  }

  public   T   getFoo() {

    return foo;
  }

  public static void main (String[] args) {
    GenericB<Cat> bar = new GenericB<Cat>();
    bar.setFoo(new Cat());
    Cat c = bar.getFoo();
  }
}

interface Pet { }
class Cat implements Pet{ }
```

Code

```
? extends Pet
T extends Pet
? implements Pet
T implements Pet
Pet extends T

?
T
<?>
Pet
```

QUESTION 23

Place code fragments into position so the output is: The quantity is 420

```
Place here    update(int quantity, int adjust) {

    Place here

}

public void callUpdate() {
  int quant = 100;
    Place here

 System.out.println("The quantity is " + quant);
}
```

Code Fragments

public int	quantity = quantity + adjust;	update(quant, 320);
public void	quant = update(quant, 320);	quantity = quantity + adjust; return quantity;

Answer:

Place code fragments into position so the output is: The quantity is 420

```
Place here    update(int quantity, int adjust) {

    Place here

}

public void callUpdate() {
  int quant = 100;
    Place here

 System.out.println("The quantity is " + quant);
}
```

Code Fragments

public int	quantity = quantity + adjust;	update(quant, 320);
public void	quant = update(quant, 320);	quantity = quantity + adjust; return quantity;

Section: (none)

Explanation/Reference:

QUESTION 24
Place the correct description of the compiler output on the code fragments to be inserted at lines 4 and 5. The same compiler output may be used more than once.

```
01. import java.util.*;
02. public class X {
03.     public static void main(String[] args) {
04.         // insert code here
05.         // insert code here
06.     }
07.     public static void foo(List<Object> list) { }
08. }
```

Code

ArrayList<String> x1 = new ArrayList<String>(); foo(x1);
ArrayList<Object> x2 = new ArrayList<String>(); foo(x2);
ArrayList<Object> x3 = new ArrayList<Object>(); foo(x3);
ArrayList x4 = new ArrayList(); foo(x4);

Compiler Output

Compilation succeeds
Compilation fails due to an error in the first statement.
Compilation of the first statement succeeds, but compilation fails due to an error in the second statement

Answer:

Code

Compilation of the first statement succeeds, but compilation fails due to an error in the second statement.
Compilation fails due to an error in the first statement.
Compilation succeeds
Compilation succeeds

Compiler Output

Compilation succeeds
Compilation fails due to an error in the first statement.
Compilation of the first statement succeeds, but compilation fails due to an error in the second statement

Explanation/Reference:

QUESTION 25
Place the code fragments into position to produce the output:

```
true true false
```

Code

```
Scanner scanner = new Scanner( "One,5,true,3,true,6,7,false");
scanner.useDelimiter(",");

while (        Place here        ) {
    if (       Place here        ) {
        System.out.print(       Place here       + " ");
    } else       Place here        ;
}
```

Code Fragments

scanner.hasNextBoolean()	scanner.nextBoolean()
scanner.next()	scanner.hasNext()

Answer:

Code

```
Scanner scanner = new Scanner( "One,5,true,3,true,6,7,false");
scanner.useDelimiter(",");

while (   scanner.hasNext()   ) {
    if (  scanner.hasNextBoolean()   ) {
        System.out.print(   scanner.nextBoolean()   + " ");
    } else   scanner.next()    ;
}
```

QUESTION 27
Place the code elements in positions so that the Flags2 class will compile and make appropriate use of the
wait/notify mechanism. Note: You may reuse code elements.

```
public class Flags2 {
    private boolean isReady = false;

    public [ Place here ]  void produce() {
        isReady = true;
        [ Place here ] ;
    }
    public [ Place here ]  void consume() {
        while (! isReady) {
            try {
                [ Place here ] ;
            } catch (Exception ex) { }
        }
        isReady = [ Place here ] ;
    }
}
```

Code Elements

| synchronized | true | false | wait() |
| volatile | synchronized() | notfyAll() | synchronize |

Answer:

```
public class Flags2 {
    private boolean isReady = false;

    public [ synchronized ]  void produce() {
        isReady = true;
        [ notfyAll() ] ;
    }
    public [ synchronized ]  void consume() {
        while (! isReady) {
            try {
                [ wait() ] ;
            } catch (Exception ex) { }
        }
        isReady = [ false ] ;
    }
}
```

QUESTION 28
Given:

```
Runnable r = new Runnable() {
    public void run() {
        try {
            Thread.sleep(1000);
        } catch (interruptedException e) {
            System.out.println("interrupted");
        }
        System.out.println("ran");
    }
};
Thread t = new Thread(r);
t.start();
System.out.println("started");
t.sleep(2000);
System.out.println("interrupting");
t.interrupt();
System.out.println("ended");
```

Assue that sleep(n) executes in exactly n milliseconds, and all other code executes in an insignificant amount of time. Place the fragments in the output area to show the result of running this code.

Output	Fragments
Place here	interrupted
Place here	ran
Place here	started
Place here	interrupting
Place here	ended
	InterruptedException
	(no more output)

Answer:

Output	Fragments
started	interrupted
ran	
interrupting	
ended	
(no more output)	InterruptedException

QUESTION 29
Add methods to the Beta class to make it compile correctly.

```
class Alpha {
  public void bar( int... x ) { }
  public void bar( int x ) { }
}

public class Beta extends Alpha {

    [ Place here ]

    [ Place here ]

    [ Place here ]

}
```

Methods

```
private void bar( int x ){}

public void bar( int x ){}

public int bar( String x ){ return 1, }

public Alpha bar( int x ){}

public void bar( int x, int y ){}

public int bar( int x ){ return x; }
```

Answer:

```
class Alpha {
  public void bar( int... x ) { }
  public void bar( int x ) { }
}

public class Beta extends Alpha {

    public void bar( int x ){}

    public int bar( String x ){ return 1, }

    public void bar( int x, int y ){}

}
```

Methods

```
private void bar( int x ){}

public Alpha bar( int x ){}

public int bar( int x ){ return x; }
```

QUESTION 30
Place the code fragments in position to complete the Displayable interface.

```
interface Reloadable {
    public void reload();
}

class Edit {
    public void edit() { /* Edit Here */ }
}

interface Displayable
```

Place here   Place here   {

Place here
}

Code Fragments

extends	public void display();	Reloadable
implements	public void display() { /* Display*/ };	Edit

Answer:

```
interface Reloadable {
    public void reload();
}

class Edit {
    public void edit() { /* Edit Here */ }
}

interface Displayable
```

extends   Reloadable   {

public void display();
}

Code Fragments

implements	public void display() { /* Display*/ };	Edit

QUESTION 31

Replace two of the Modifiers that appear in the `Single` class to make the code compile.
Note: Three modifiers will not be used and four modifiers in the code will remain unchanged.

Code

```
public class Single {

    [private]  [static]  Single instance;

    [public]   [static]  Single getInstance() {

        if (instance == null) instance = create();
        return instance;
    }

    [private]  Single() { }

    [protected]  Single create() { return new Single(); }

}

class SingleSub extends Single {
}
```

Modifiers

[final]
[protected]
[private]
[abstract]
[static]

Done

Answer:

Replace two of the Modifiers that appear in the `Single` class to make the code compile.
Note: Three modifiers will not be used and four modifiers in the code will remain unchanged.

Code

```
public class Single {

    [private]  [static]  Single instance;

    [public]   [static]  Single getInstance() {

        if (instance == null) instance = create();
        return instance;
    }

    [protected]  Single() { }

    [static]  Single create() { return new Single(); }

}

class SingleSub extends Single {
}
```

Modifiers

[final]

[private]
[abstract]

Done

QUESTION 32

Given: 1.

```
 1. import java.util.*;
 2. class A { }
 3. class B extends A { }
 4. public class Test {
 5.   public static void main(String[] args) {
 6.     List<A> listA = new LinkedList<A>();
 7.     List<B> listB = new LinkedList<B>();
 8.     List<Object> listO = new LinkedList<Object>();
 9.     // insert code here
10.   }
11.   public static void m1(List<? extends A> list) { }
12.   public static void m2(List<A> list) { }
13. }
```

Place a result onto each method call to indicate what would happen if the method call were inserted at line 9. Note: Results can be used more than once.

Method Calls		Result
m1(listA);	m2(listA);	Does not compile.
m1(listB);	m2(listB);	Compiles and runs without error.
m1(listO);	m2(listO);	An exception is thrown at runtime.

Answer:

Given: 1.

```
 1. import java.util.*;
 2. class A { }
 3. class B extends A { }
 4. public class Test {
 5.   public static void main(String[] args) {
 6.     List<A> listA = new LinkedList<A>();
 7.     List<B> listB = new LinkedList<B>();
 8.     List<Object> listO = new LinkedList<Object>();
 9.     // insert code here
10.   }
11.   public static void m1(List<? extends A> list) { }
12.   public static void m2(List<A> list) { }
13. }
```

Place a result onto each method call to indicate what would happen if the method call were inserted at line 9. Note: Results can be used more than once.

Method Calls		Result
Compiles and runs without error.	Compiles and runs without error.	Does not compile.
Compiles and runs without error.	Does not compile.	Compiles and runs without error.
Does not compile.	Does not compile.	An exception is thrown at runtime.

QUESTION 33

Place a Class on each method that is declared in the class.

Method Name	Class
run()	java.lang.Object
wait()	java.lang.Thread
notify()	
sleep()	
start()	
join()	

Answer:

Place a Class on each method that is declared in the class.

Method Name	Class
java.lang.Thread	java.lang.Object
java.lang.Object	
java.lang.Object	java.lang.Thread
java.lang.Thread	
java.lang.Thread	
java.lang.Thread

QUESTION 34

Place the code into the GenericB class definition to make the class compile successfully.

```
import java.util.*;

public class GenericB<        Place         > {

    public  Place  foo;

    public void setFoo(Place      foo) {
        this.foo = foo;
    }

    public   Place   getFoo() {

        return foo;
    }

  public static void main (String[] args) {
    GenericB<Cat> bar = new GenericB<Cat>();
    bar.setFoo(new Cat());
    Cat c = bar.getFoo();
  }
}

interface Pet { }
class Cat implements Pet{ }
```

Code

```
? extends Pet
T extends Pet
? implements Pet
T implements Pet
Pet extends T
?
T
<?>
Pet
```

Answer:

Place the code into the GenericB class definition to make the class compile successfully.

```
import java.util.*;

public class GenericB<   T extends Pet   > {

    public   T   foo;

    public void setFoo(  T      foo) {
        this.foo = foo;
    }

    public   T   getFoo() {

        return foo;
    }

  public static void main (String[] args) {
    GenericB<Cat> bar = new GenericB<Cat>();
    bar.setFoo(new Cat());
    Cat c = bar.getFoo();
  }
}

interface Pet { }
class Cat implements Pet{ }
```

Code

```
? extends Pet
T extends Pet
? implements Pet
T implements Pet
Pet extends T
?
T
<?>
Pet
```

QUESTION 35

Place the code fragments into position to produce the output:

```
true true false
```

Code

```
Scanner scanner = new Scanner( "One,5,true,3,true,6,7,false");
scanner.useDelimiter(",");

while (          Place here          ) {
  if (          Place here          ) {
    System.out.print(          Place here          + " ");
  } else          Place here          ;
}
```

Code Fragments

scanner.hasNextBoolean()	scanner.nextBoolean()
scanner.next()	scanner.hasNext()

Answer:

Code

```
Scanner scanner = new Scanner( "One,5,true,3,true,6,7,false");
scanner.useDelimiter(",");

while (    scanner.hasNext()    ) {
  if (    scanner.hasNextBoolean()    ) {
    System.out.print(    scanner.nextBoolean()    + " ");
  } else    scanner.next()    ;
}
```
